Fisheries Statistical Report

Year: 2016

SEYCHELLES FISHING AUTHORITY

P.O. Box 449, Fishing Port, Mahé, Seychelles, Tel: 4 670300, Fax: 4 224508,
Email: management@sfa.sc, Website: www.sfa.sc

Introduction

The Seychelles Fishing Authority (SFA) was incorporated in August 1984 by the Seychelles Fishing Authority (Establishment) Act. This body was formed in view of the need to develop the fishing industry to its fullest potential. It is a parastatal organization with autonomous legal and financial status, supervised by a board of directors appointed by the President.

The Ministry of Natural Resources is responsible for policy directives in fisheries related matters, and SFA is the executive arm of the government in all fisheries activities. Responsibilities include:

- assessment and management of the fisheries resources;
- assistance in conducting negotiations with foreign fishing fleet operators;
- coordination and support of fishing ventures and owner/operators;
- management of the fishing port;
- development of gear technology;
- coordination of manpower training in the fishing sector;

This report provides statistical and economic information of key fisheries of the Seychelles and is published bi-annually. This volume contains fisheries statistics for purse seine, industrial longline, semi industrial longline and artisanal fishery in addition to fisheries statistics in port Victoria and fisheries export information.

NOTES

This Statistical bulletin presents statistics for purse seine fishery, semi industrial longline fishery, and artisanal fishery for the year 2015 and 2016. Time series data for last 10 years is also presented for each fishery. It must be noted that fisheries economic information such as Vessel expenditures and export will not feature in this current report and future fisheries statistical report. For such information contact the SFA Economic section.

Data used to generate the tables and figures for industrial and semi industrial fishery presented here are based on daily catch and effort forms (logbooks) and landing and transhipment forms returned from fishing vessels that are licensed to fish in the Seychelles EEZ as well as from data collected via the tuna sampling programme conducted during unloading in Port Victoria. Sometimes there are delays in these being received at SFA, especially for longliners that often spend up to a year at sea. For purse seiners the delays are usually during and just after the second quarter of the year when most vessels are fishing in the Mozambique Channel and are not necessarily using Port Victoria for transhipment.

Readers should note that some figures presented in this bulletin may be different to previously published because these figures have been revised following thorough verifications carried out on the data following database upgrading, revised EEZ shape file used or data validation using VMS data. Also some of the figures presented may be subject to revision (usually upwards) as more data become available.

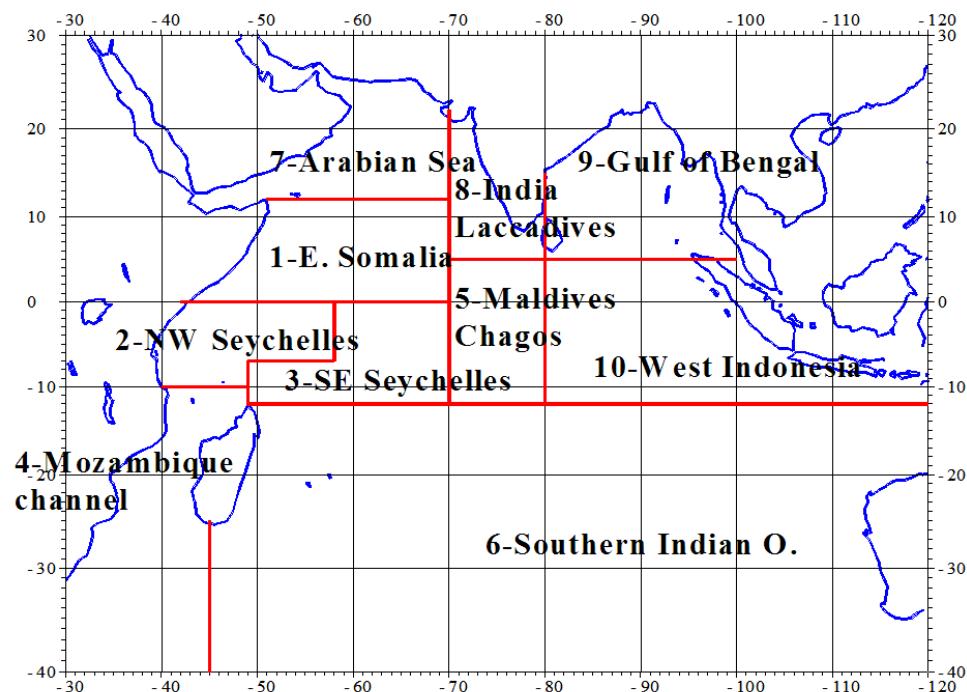

Since space is a limiting factor in some tables, flag country appearing in these tables is included based on their total catch. The remaining flags are classified under "OTHERS". Flag countries with only one vessel are automatically placed under "OTHERS" to preserve the confidentiality of data pertaining to the vessel.

Purse Seine Fishery:

- Readers should note that the catch composition recorded by fishermen in their daily catch and effort reports were corrected based on scientific sampling carried out during transhipment or landing in Port Victoria.
- Total tuna transhipped in Port Victoria refers to the total amount of fish transhipped from purse seiners to reefers or to containers, whereas those landed are amount of fish landed in the port for further local processing or sale.
- Vessels covered refer to vessels for which a logbook has been received and processed.
- The total number of vessels licensed and covered may not correspond to the direct summing of number of vessels licensed or vessel covered by countries by month or by year. The reason for this is that a vessel may change licence from one country to another in the same month, hence counted under both countries for that particular month or year.
- Where a trip is spread over two different years, e.g. December 2014 - January 2015, the catch up to December 2014 will be attributed to 2014 and the catch made in January 2015 will be

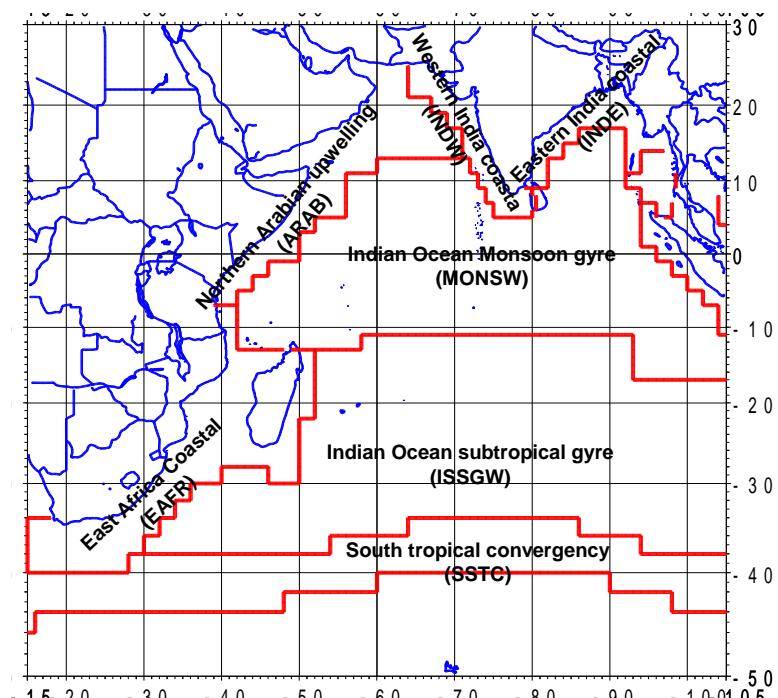

attributed to 2015. However the transhipment/landing will be attributed to the year 2015 when that transhipment/ landing occur. Hence the difference between the total catch for the year and the total catch transhipped/ landed.

- Maps showing the Zones of Indian Ocean for Purse seine fishery

Industrial Longliners Fishery:

- For industrial longliners, the statistics presented for the year 2014 are based on 88% of logbook returned to SFA whilst for 2015; the figures are for only 48% of the logbooks returned.
- Since the duration of licenses can vary from one month to twelve months, for comparison purposes, each month covered in a logbook was considered as one logbook.
- Readers should be aware that the longliners statistics represent only a small sample of longliners activity in the WIO because:
 - Not all longliners in the WIO have a license to fish in the Seychelles EEZ and therefore are under no obligation to report to SFA. Unlike purse seiners who provide details of all activities inside and outside the Seychelles EEZ, longliners are under obligation to provide data for activities only inside of the Seychelles EEZ unless they are Seychelles registered vessels who are obliged to provide detail of all their activities.
 - Some Distant Water Fishing Nations (DWFN) provide SFA with log sheets covering their activity in the whole Indian Ocean while others confine their reports to the Seychelles EEZ only.
- Maps showing the Zones of Indian Ocean for Longline fishery.

Longhurst areas

Artisanal Fishery:

- The catches for artisanal fishery presented here may be slightly different to previously published figures since data previously published as dropline catches has been revised and published as 'Others' to include catches for gears not previously captured by the Artfish software notably dropline, reels and hoop tangled net. Such gears are mostly used by schooner vessels and Semi industrial longliners conducting artisanal fishing trips. Hence the catches for schooners may be slightly different to that previously published.

Definitions of terms used

TERMS	DEFINITION
EEZ	Exclusive Economic Zone
WIO	Western Indian Ocean
NEI	Not elsewhere included
VESSELS LICENSED	Vessels licensed to fish in the Seychelles EEZ.
VESSELS COVERED	Vessels for which a logbook has been received containing at least one fishing day during the month; or a vessel that is not fishing yet the SFA knows of its activities.
FISHING DAYS	Days spent at sea minus days on passage, days adrift due to mechanical breakdown or other work stoppage. This may include days spent in searching even if no fish was actually caught or days spent drifting.
CATCH	MT - Metric Tonne (1000 kg)
CATCH RATE	Total Catch per fishing effort.
TRANSSHIPMENT	Generally the transfer of tuna fish from a catcher vessel to a 'reefer' or cargo vessel. This normally takes place in port.
LANDING	This also includes fish landed in Port Victoria, Seychelles for the IOT canning factory. Most of this is subsequently re-exported.
COUNTRY OF REGISTRATION	Country in which ownership of the vessel is registered.
FLAG	Country and agreement under which the vessel is managed.

Purse Seine Fishery

1. SUMMARY OF PURSE SEINE FISHERY

1.1. *Vessels Licensed and Active*

- The total number of Purse seiners licensed to fish inside the Seychelles EEZ has been more or less constant over the period 2006 to 2009 averaging to 57 vessels licensed per year. In 2010 the number of vessels licensed drop by 11% and by a further 30% in 2011 to reach a record low of 35 vessels licensed since 2004 which could mostly be due to piracy threats in the Indian Ocean. The number of vessels licensed has since then been on the increased reaching 49 vessels licensed in 2015 (table1.2).
- In 2016, the number of purse seiners licensed to fish in the Seychelles EEZ was similar to the previous year where 49 vessels licensed were (table 1.2A) out of which 13 where Seychelles flagged vessels, 29 vessels were licensed under the EC agreement and 7 vessels were operating under other private agreement.
- During the year 2016, the number of supply vessels licensed to operate inside the Seychelles EEZ increased by 1 vessel to reach 19 supply vessels licensed out of which 10 vessels were licensed under Spanish flag and 7 vessels were licensed under Seychelles flag. It must be noted that one Seychelles flagged supply vessel was deregistered and a new one was licensed. A new supply vessel was also licensed under the French flag.
- The total number of purse seiners active shows similar historical trend to the number of vessels licensed over the last 10 years (table 1.2B). During the year 2016, on average 45 vessels were active per month compared to 43 vessels active per month during the previous year (table 1.2C).

1.2. *Fishing Effort, Catches and Catch Rate in WIO*

- Trend analysis of the purse seine catches in Seychelles over the last 10 years shows that following a significant drop of 37% in catches in 2007 from the previous year, the purse seine catches has since then remained more or less stable (figure 1A). The fishing effort increased steadily from the year 2005 to reach a record high of 14,930 fishing days in 2007. Fishing effort was then on a downward trend until 2010 and has since then remained more or less stable (figure 1B). The CPUE dropped to a record low of 16.45MT/ fishing day in 2007 and has since then fluctuate between 21.10 MT/ fishing day and 29.97 MT/ fishing day (table 1.3 and figure 1C).
- Based on logbook received at the SFA, the total catch in the Western Indian Ocean reported by purse seiners holding licences to fish inside the Seychelles EEZ for the year 2016 is estimated at 350,913 MT, representing a 21% increased over the estimated catch of 289,704 MT reported in 2015 (table 1.3B). This is the highest catch recorded since 2006. Such increase in catches may be attributed to the 8% increased in fishing effort from 12,756 fishing days estimated for the previous year to 13,721 fishing days estimated for the year 2016. The mean catch rate (CPUE) also increased from 22.71 MT/ fishing day in 2015 to 25.57 MT/ fishing day for the year 2016.

- The purse seine tuna catches in the Western Indian Ocean during the first semester of 2016 is estimated at 157,425 MT representing a 6% increase in catches over the same period in 2015. This was achieved from a fishing effort of 6,822 fishing days thus giving a mean catch rate of 23.08 MT/ fishing day (table 1.3). The total catch for the first semester of 2015 is estimated at 148,473 MT achieved from a fishing effort of 5,977 fishing days with a mean catch rate of 24.84 MT/ fishing day.
- During the second semester of 2016, a total catch of 193,488 MT was reported, achieved from a fishing effort of 6,899 fishing days representing a 37% increase over the 141,230 MT reported during the same period in 2015. The fishing effort for second semester of 2015 was estimated at 6,779 fishing days. The catch rate for the second semester of 2016 increased significantly from 20.83 MT/ fishing day during that period in 2015 to 28.04 MT/ fishing day in 2016.

1.2.1. Fishing Effort, Catches and Catch Rate in WIO by Fleet

- As has been the case historically, catches by purse seiners during the year 2016 was dominated by the Spanish fleet accounting for 39% of the total catch whilst the Seychelles and French fleet accounted for 31% and 19% respectively. During the previous year the Spanish, Seychelles and French fleet accounted for 42%, 31% and 19% of the total purse seine catches in WIO respectively.
- In 2016, the Spanish fleet reported a total catch of 136,172 MT compared to 120,263 MT during the same period of the previous year, representing a 13% increase in catches although only a mere 3% increase was reported in fishing effort. The catch rate for the Spanish fleet for the year 2016 and 2015 stand at 31.97 MT/ fishing day and 29.07 MT/ fishing day respectively (table 1.3C).
- The total catch for the Seychelles fleet increased significantly by 22% from 88,740 MT in 2015 108,583 MT in 2016 corresponding to a 25% increase in fishing effort. However the catch rate for the Seychelles fleet decreased from 27.19 MT/ fishing in 2015 to 26.70 MT/ fishing in 2016 (table 1.3B).
- The estimated catch for the French fleet also increased significantly by 25% in 2016 when compared to the previous year. A total catch of 68,420 MT was reported in 2016 compared to 54,552 MT recorded the previous year (table 1.3D). The fishing effort for the French fleet remained more or less the same whilst the catch rate increased from 15.90 MT/ fishing day in 2015 to 19.70 MT/ fishing day for the year 2016.
- The remaining 37,738 MT of catches reported for the year 2016 was caught by Mauritian, Italian and South Korean vessels achieved from a fishing effort of 1,923 fishing days with a mean catch rate of 19.63 MT/ fishing day. This represents a remarkable increased of 44% in catches despite the effort remaining more or less constant. During the previous year, vessels under other flags (Mauritius, Italy and South Korea) reported an estimated catch of 26,149 MT from a fishing effort of 1,925 fishing days with a mean catch rate of 13.58 MT/ fishing day (table 1.3E).

1.3. *Species Composition of Catches in WIO*

- Figure 1J shows the trend in catches by species caught by purse seiners to the total catch. Historically Skipjack tuna dominated the purse seine catches in the Western Indian Ocean (table 1.3). However since 2012, yellowfin replaced skipjack tuna as the dominant species caught.
- During the year 2016, Skipjack tuna dominated the total purse seine catches, accounting for 52% of the total catch followed by yellowfin tuna representing for 42% of the total catch, whilst bigeye tuna made up only 6% of the total catch. Yellowfin dominated the purse seine catches during the previous year accounting for 47% of the total catch whilst skipjack tuna represented 44% of the total catch.
- In 2016, Skipjack tuna catches increased remarkably by 42% from 128,143 MT in 2015 to an estimated total of 182,516MT. The total yellowfin catches is estimated at 146,314 MT, a slight 8% higher than the 135,797 MT reported for the previous year whilst bigeye tuna catches decreased by 15%, from 25,039 MT in 2015 to 21,378 MT in 2016.

1.4. *Catch by School Type*

- Trend analysis of the catch by school type shows that since 2006 purse seiners licensed to fish inside the Seychelles EEZ reported to have fished more on FAD's associated school (table 1.5A and figure 1G).
- In 2016, a total of 284,146 Mt of tuna were caught on FAD's associated school representing 81% of the total catch and 57,892 MT or 16% of the total catch was caught on free swimming school. During the previous year, 72% or 209,781 MT of catches were on FAD's associated schools whilst 28% or 79,741 MT of the catches were reported to have been caught on free swimming school. This reflects a 35% increase in catches on FAD's associated school and a 27% decrease in catches on free swimming school.
- Species wise, 60% of the catch on FAD's associated school were skipjack tuna and 34% were yellowfin tuna more or less similar to that of the previous year. Bigeye tuna accounted for only 6% of the catch on FADs. Catches on free swimming schools was dominated by yellowfin tuna representing 72% of the total catch whilst skipjack and bigeye tuna accounted for 13% and 5% of the catch on free swimming schools respectively. Similar compositions were observed for the previous year.

1.5. *Activity inside the Seychelles EEZ*

- Trend analysis of the purse seine fishery in the Seychelles EEZ shows that catches inside the Seychelles EEZ fluctuated over the last 10 years with a peak of 81,666 MT recorded in 2004 and the lowest catch of 36,101 Mt recorded in 2013 (figure 1D). The fishing effort increased steadily from 2004 to a peak of 5,400 fishing days in 2007, then dropped sharply to a dip of 2,194 fishing days in 2009 and had since then remained more or less stable averaging to 2,632 fishing days between 2010 and 2013 (figure 1E). The CPUE analysis shows a downward trend

from 24.55 MT/fishing day in 2004 to a dip of 12.33 MT/ fishing day in 2007 followed by an increasing trend to 24.55 MT/ fishing day in 2010 and had since then been on a decreasing trend (figure 1F).

- A record catch of 92,515 MT was reported inside the Seychelles EEZ during the whole year 2016 representing an 89% increase from the 49,046 MT reported for the year 2015. The increase in catches inside the Seychelles EEZ corresponds to a 56% increase in fishing effort from 3,001 fishing day in 2015 to 4,681 fishing day in 2016. The mean catch rate for 2016 inside the Seychelles EEZ stands at 19.76 MT/fishing day compared to 16.34 MT/fishing day in 2015 (table 1.4).
- The purse seine tuna catch reported inside the Seychelles EEZ during the first semester of 2016 is estimated at 44,416 MT (table 1.4A) achieved by a fishing effort of 2,657 fishing days, thus giving a mean catch rate of 16.72 MT/ fishing day. This represents a notable increase of 68% in catches corresponding to 77% increase in fishing effort over the same period the previous year (table 1.4A). During the same period the previous year, the purse seine tuna catch reported inside the Seychelles EEZ was estimated at 26,476 MT (table 1.4A) achieved by a fishing effort of 1,497 fishing days, thus giving a mean catch rate of 17.68 MT/ fishing day (table 1.4A).
- During the second semester of 2016, a total of 48,099 MT of tuna were reported to have been caught by purse seiners inside the Seychelles EEZ obtain from a fishing effort of 2,024 fishing days, thus giving a mean catch rate of 23.76 MT/ fishing day. This represents a noteworthy increase of 113% in total catch from 22,570 MT in catches reported in 2015 attributed to a 35% increase in fishing effort from 1,504 fishing days over the same period of the previous year inside the Seychelles EEZ.
- The monthly trend in catches shows that highest catch and catch rate inside the Seychelles EEZ were recorded in September in 2016 with total catch of 11,052 MT and a mean catch rate of 38.30 MT/fishing day. During the previous year, the highest catch and catch rate were reported during the month of February with an estimate catch of 12,768 MT and a mean catch rate of 35.71 MT/fishing day.

1.5.1. Activity inside the Seychelles EEZ by Fleet

- During the year 2016, the French and the Spanish fleet dominated the total catch inside the Seychelles EEZ accounting for 34% and 30% respectively whilst the Seychelles fleet represented 23% of the total catch. During the previous year the Spanish, French and Seychelles fleet accounted for 34%, 31% and 24% of the Seychelles EEZ catches respectively.
- In 2016, the French fleet reported a total catch of 30,997 MT inside the Seychelles EEZ and a mean catch rate of 19.48 MT/ fishing day (table 1.4 D). This represents a notable increase of 103% in EEZ catches by the fleet corresponding to a 47% increase in fishing effort. The total catch and catch rate for the French in the previous year stood at 15,254 MT and 14.12 MT/fishing day respectively.
- The Spanish fleet reported EEZ catch also increase considerably by 67% corresponding to a 32%

increase in fishing effort during the year 2016 over the catches and effort reported during the previous year. The estimated catch reported by the Spanish fleet in 2016 is estimated at 27,627 MT with a mean catch rate of 25.48 MT/fishing day compared to a catch of 16,591 MT and a catch rate of 20.19 MT/fishing day in 2015 (table 1.4C).

1.6. Statistics of Seychelles Flagged Vessels

- Trend analysis of the Seychelles flagged purse seine catches over the last 10 years shows that a sharp dropped in catches from 79,342 MT in 2006 to 49,936 MT in 2007 and since then catches has fluctuated between 50,000 MT and 75,000 MT. The fishing effort has since 2007 been on a downward trend to a mere 1,809 fishing days in 2013. The CPUE dropped to a record low of 15.82 MT/ fishing day in 2007, followed by an increasing trend to a peak of 32.63 MT/ fishing day in 2010 and has since then fluctuate between 23.88 MT/ fishing day and 31.69 MT/ fishing day (table 1.3 and figure 3).
- The Seychelles flagged purse seiners reported a record catch of 108,583 MT in the WIO in 2016, achieved from a fishing effort of 4,066 fishing days thus giving a mean catch rate of 26.70 MT/fishing day representing a 22% increase in catches corresponding to a 25% increase in fishing effort. In 2015 the Seychelles purse seine fleet reported a total catch of 88,740 MT obtained from a fishing effort of 3,264 fishing days with a mean catch rate of 27.19 MT/ fishing day (table 1.3B).
- The Seychelles fleet catch inside the Seychelles EEZ in 2016 is estimated at 21,184 MT compared to 11,650 MT during the previous year thus increasing by a remarkable 82% (table 1.4B). This was achieved from an 88% increase in fishing effort from 651 fishing days in 2015 to 1,223 fishing days in 2016. The catch rate for the Seychelles fleet inside the Seychelles EEZ is estimated at 17.32 MT/ fishing day and 17.90 MT/ fishing day in 2016 and 2015 respectively (table 1.4B).
- In terms of geographical areas, 69% of the Seychelles purse seine fleet catches reported to have been caught on the high seas and only 20% of its catches were reported to have been caught inside of the Seychelles EEZ in 2016 (table 1.4F). During the previous year, 83% and 13% of the Seychelles fleet catches were caught on the high seas and inside the Seychelles EEZ respectively.

1.7. Purse seine statistics by Access Regime

- In 2016, purse seiners licensed to operate inside of the Seychelles EEZ were operating under the National or Seychelles flag licences, the European Community (EC) agreement and under individual agreement with South Korea, Italy and Mauritius hereafter group as ‘Others’.
- During the year 2016, vessels fishing under the EC agreement reported a total catch of 60,346 MT or 65% of the total reported catch inside the Seychelles EEZ. This represents a significant increase of 86% in catches inside the Seychelles EEZ from the 32,505 MT reported in 2015. This was achieved from a fishing effort of 2,811 fishing days thus giving a mean catch rate of 21.47

MT/ fishing day. A total of 1,987 fishing days and a mean catch rate of 16.36 MT/ fishing day were reported for the year 2015 (table 1.6).

- Vessels under other agreement also recorded a remarkable increase of 125% in catches corresponding to a 76% increase in fishing effort inside the Seychelles EEZ during 2016 when compared to the previous year. In 2016 Vessel under other agreement reported a total catch of 10,983 MT accounting for 9% of the total EEZ catch obtained from a fishing effort of 634 fishing days giving a mean catch rate of 17.33 MT/ fishing day. This compared to an estimated total catch of 4,889 MT for the year 2015 corresponding to a fishing effort of 360 fishing days thus giving a mean catch rate of 13.59 MT/ fishing day.

1.8. Landing and Transhipment Statistics

- Time series analysis of landing and transhipment shows that following a drop of 39% in the volume of purse seine catches unloaded in Port Victoria in 2007, due to a drop in total catch in WIO, the landing and transhipment has thereafter remained constant (table 1.7 and figure 1K).
- Similar to previous years, Port Victoria remained the principal port for tuna transhipment and landing by purse seiners in the WIO during 2016. A total of 326,461 MT of tuna was unloaded through port Victoria compared to 270,340 MT in 2015. This represents 97% of the total landing and transhipment for that year (figure 1L) and an 21% increase from the previous year.
- In 2016, 80% of the total catch unloaded in Port Victoria or 261,291 MT of tuna unloaded in Port Victoria were transhipped onto reefer or into containers for export whilst the remaining 20% or 65,171 MT of tuna were landed in Port Victoria for local processing or sale (table 1.8). In 2015, a total of 204,461 MT of tuna were transhipped and 65,880 MT were landed in Port Victoria. These represent an increase of 28% in transhipment and a drop of 1% in landings in port Victoria respectively during the year 2016 compared to the previous year.
- Out of the 261,291 MT of tuna transhipped in Port Victoria in 2016, 71% or 184,854 MT were transhipped onto reefer vessels whilst 29% or 76,437 MT were transhipped into containers for export (table 1.9). This represent an increase of 46% and 21% of tuna transhipped via containers and reefer vessels respectively when compared to the previous year. In 2015 a total of 152,191 MT or 74% of total tuna transhipped were by reefer vessels and 26% or 52,270 MT of tuna were transhipped into containers.
- Analysis of catch landed/transhipped in port Victoria by fleet shows that historically, the Spanish fleet dominated tuna unloading in Port Victoria. In 2016 the Spanish fleet landed and transhipped a total of 122,816 MT of tuna in port Victoria representing 38% of the total catch unloaded in Port Victoria during that year whilst the French and Seychelles fleet accounted for 20% (or 64,891 MT) and 31% (or 102,074 MT) respectively (table 1.8). During the previous year, the Spanish fleet accounted for 43% (or 116,201 MT) of landing and transhipment in Port Victoria whilst the French and Seychelles fleet accounted for 18% (or 48,152 MT) and 30% (or 79,917 MT) respectively.

1.9. Fishing Ground

- Map 1A and 1B show the distribution of reported catch of purse seiner by 1° square in the WIO for the years 2015 and 2016 respectively. Map 1C and 1D shows the distribution of reported catch of purse seiner by 1° square in the WIO for the 1st Semester of 2015 and 2016 respectively whilst maps 1E and 1F show the distribution of reported catch of purse seiner by 1° square in the WIO for the 2nd Semester of 2015 and 2016 respectively.
- Maps 1B show that the 2016 fishing pattern appears to be similar to that of the previous year (Map 1A) with increased catches in the NW and SE Seychelles. Increased in skipjack catches can also be observed.
- Maps 1D show decreased catches in the NW Seychelles area and increased catches in the SE Seychelles area and the Mozambique Channel during the first semester of 2016 when compared to the same period in 2015 (Map 1C).
- Maps 1F show increase catches in the NW and SE Seychelles area in the second semester of 2016 when compared to the same period the previous year (map 1E).

Industrial Longline Fishery

2. SUMMARY OF INDUSTRIAL LONGLINE FISHERY

2.1. *Logbook Returned*

- The statistics published for 2015 relates to 95% logbooks captured in the database at the time when those statistical tables were generated compared to 88% for the previous year (Table 2.2).
- For the Seychelles Flagged vessels 96% of logbooks were returned to SFA for the year 2015 compared to 95% in 2014. At the close of the database for data processing, 94% of logbooks for other fleet were captured in the database for the year 2015 compared to 84% in 2014.

2.2. *Vessels Licensed and Active*

- Since 2006 the number of industrial longliners licensed to fish inside the Seychelles EEZ has been on a decreasing trend from 321 vessels licensed in 2004 to reach a record low of 65 vessels licensed in 2010. Since then the number of vessels taking licenses has increased to reach 174 vessels licensed in 2013 (table 2.1). This increase can be attributed to the decrease in Somalia piracy attack in the region; hence more licenses are being taken by the industrial longliners.
- In 2015, an increase of 9 vessels was recorded in number of vessels licensed to fish inside the Seychelles EEZ resulting in 157 vessel licensed compared to 148 vessel licensed the previous year. There was an increase of 18% in number of Seychelles registered vessels from 38 vessels in 2014 to 45 vessels in 2015.
- On average, 27 Seychelles registered longliners vessels were active per month during the year 2015 similar to the number of vessels active during 2014. In 2015, an average of 26 Taiwanese vessels was active inside the Seychelles EEZ per month whilst an average of 22 vessels were active in 2014 (table 2.1C).

2.3. *Fishing Effort, Catches and Catch Rate in WIO*

- The total catch and fishing effort of industrial longliners has been on the decreasing trend since 2005 to reach a record low of 8,276 MT in catches in 2011 corresponding to a record low of 17.7 million hooks sets (figure 2A and 2B). This can be attributed to the decreasing trend in the number of vessels licensed and active during that period. In 2012 the catch increased by 182% corresponding to a 92% increase in fishing effort (table 2.2A). The industrial Longliners displayed a steady catch rate (around 0.40 Mt/1000 hooks) over the period 2006 to 2010. In 2012, the catch rate increase to reach a peak of 0.68 Mt/1000 hooks, the highest recorded over the last 10 years (figure 2C).
- The total catch reported by all industrial longline fleet during the year 2015 is estimated at 20,390 MT, representing an increase of 13% over the total catch reported for 2014 corresponding to a 7% increase in fishing effort. The total catch reported for the year 2015 was obtained from a fishing effort of approximately 39 million hooks thus giving a mean catch rate

of 0.52 MT/1000 hooks (table 2.2B). In 2014, a total catch of 18,001 MT was reported, achieved from a fishing effort of approximately 36.5 million hooks giving a mean catch rate of 0.49 MT/1000 hooks.

- Monthly analysis of catch rate shows that, the highest catch rate was recorded in the months of May and December (0.60 MT/ 1000 hooks) in 2015 whilst the catch rate was highest in December in 2014 at 0.63 MT/ 1000 hooks. In 2015 highest catches were reported during the month of December which represents 20% of the annual catch corresponding to 18% of the annual total effort for that year. During the previous year highest catch were also reported in the month of December which accounted for 24% and 19% of the annual catch and effort for that year respectively.

2.3.1. Fishing Effort, Catches and Catch Rate in WIO by Fleet

- The Seychelles fleet reported an estimated catch of 12,518 MT for the year 2015 based on 96% logbook returned. This was achieved from a fishing effort of 22.8 million hooks thus giving a mean catch rate of 0.55 MT/1000 hooks. This represents an increase of 18% in catches and 6% in fishing effort when compared to the previous year (table 2.2C). In 2014, the Seychelles fleet reported a total catch of 10,633 MT for the year 2014 based on 95% logbook returned. This was achieved from a fishing effort of 21.5 million hooks thus giving a mean catch rate of 0.49MT/1000 hooks.
- The Taiwanese fleet has reported a total catch of 6,827 MT for the year 2015 based on only 95% logbook returned. This was achieved from a fishing effort of 13.5 million hooks with a mean catch rate of 0.51 MT/1000 hooks. For 2014, the Taiwanese fleet reported a total catch of 5,729 MT from a fishing effort of 11.0 million hooks and a mean catch rate of 0.52 MT/1000 hooks (table 2.2D) based on 81% logbook returned.
- The remaining 1,045 Mt of tuna reported in the industrial longline fishery were from vessels of other fleets achieved from a fishing effort of approximately 2.7 million hooks and a mean catch rate of 0.39 MT/1000 hooks based on 88% logbook returned . This represents a decreased of 36% in catches by other fleet corresponding to a 33% decrease in fishing effort when compared to the previous year. In 2014, vessels from other fleets reported an estimated catch of 1,639 MT achieved from a fishing effort of approximately 4 million hooks giving a mean catch rate of 0.41 MT/1000 hooks (table 2.2E).

2.4. Species Composition in WIO

- During the years 2015 and 2014, bigeye tuna dominated the catch of the industrial longline fleet accounting for 47% and 51% of the total catch respectively. Yellowfin tuna represents 21% and 19% of the total catch in 2015 and 2014 respectively (table 2.2B). In 2015 Swordfish and marlins accounted for 11% and 10% of the total catch respectively whilst during the previous year their catches accounted for less than 10% of the total catch. Fish categorize as “others” represents 6% of the total catch in 2015 compared to 10% in 2014.
- In 2015, yellowfin catches increased by 31% from 3,333 MT in 2014 to 4,374 MT in 2015. Bigeye tuna catches also increase by 6% from 9,112 MT in 2014 to 9,618 MT in 2015 whilst

catches of swordfish and marlin increased by 51% and 67% respectively. Catches of shark and other species decreased by 23% and 25% respectively.

2.5. *Activity inside the Seychelles EEZ*

- Time series of total catch and fishing effort of industrial longliners inside the Seychelles EEZ shows similar trend to that in the WIO. Both catch and effort inside the Seychelles EEZ has been on a decreasing trend since 2005 to reach a record low of 1,343 MT in catches in 2011 corresponding to a record low of 2.4 million hooks sets (figure 2D and 2E). This can be attributed to the decreasing trend in the number of vessels licensed and active during that period. In 2012, a significant increase of over 500% in both catch and effort were recorded returning the catch level to 9,296 MT similar to that of 2006. In 2012 the catch rate of 0.59 MT/1000 hooks reported inside the Seychelles EEZ was the highest recorded for the past 10 years (table 2.3 and figure 2F).
- In 2015, the industrial longliners licensed to fish inside the Seychelles EEZ reported to have caught an estimated catch of 10,691 MT inside of the Seychelles EEZ. This was obtained from a fishing effort of approximately 21.7 million hooks giving a mean catch rate of 0.49 MT/ 1000 hooks (table 2.3A). This represent a slight increase of 8% in catches corresponding to a 9% increase in fishing effort when compared to the previous year. In 2014, a total catch of 9,927 MT obtained from a fishing effort of approximately 20 million hooks was reported to have been caught inside of the Seychelles EEZ, thus giving a mean catch rate of 0.50 MT/1000 hooks.
- Catches inside the Seychelles EEZ were dominated by bigeye tuna accounting for 49% of the total catch in 2015, whilst yellowfin tuna accounted for 28%. During the previous year, bigeye tuna represents 55% of the total catch followed by yellowfin tuna 23%. For the past two years, swordfish, marlin and shark each accounted for less than 10% of the total EEZ catch.
- Analysis of monthly trend shows, higher catches were recorded inside the Seychelles EEZ during the month of December in both 2015 and 2014 respectively. Higher catch rate was reported in the months of May in 2015 (0.58 MT/1000 hooks) whilst in 2014, higher catch rate was reported during the month of August (0.63 MT/1000 hooks).

2.6. *Statistics of Seychelles Flagged Vessels*

- The total catch by Seychelles registered industrial longliners has remained more or less constant averaging to around 7,700Mt between the years 2006 and 2011. In 2012, Catches of the Seychelles fleet increased by 100% to a peak of 15,116 MT and has since then been slightly decreasing (table 2.4 and figure 2G). Similar pattern was observed inside the Seychelles EEZ by the Seychelles fleet between the years 2006 and 2011. Since 2012, catches by the Seychelles fleet has been on an increasing trend. Between the year 2006 and 2011, the effort remained more or less steady in both WIO and inside the Seychelles EEZ and has increased considerably in 2012 (table 2.4 and figure 2H). Same observations were made for CPUE (figure 2I).
- For the year 2015, the Seychelles flagged industrial longliners reported an estimated catch of 12,518 MT representing an 18% increase in catches in WIO corresponding to a 6% increase or 22.8 million hooks in fishing effort. During the previous year the Seychelles fleet reported an

estimated total catch of 10,633 MT achieved from a fishing effort 21.5 million hooks (table 2.4A). The CPUE stands at 0.55 MT/ 1000 hooks in 2015 and 0.49 MT/1000 hooks in 2014 for the Seychelles fleet (table 2.4A).

- The Seychelles flagged industrial longliners reported to have caught 67% of their total catch or 8,426 MT of tuna on the high Seas and 26% of their catches or 3,312 MT in the Seychelles EEZ in 2015. During the previous year, 64% (or 6,824 MT) and 28% (or 2,975 MT) of the Seychelles flagged industrial longliners catches were caught on the high Seas and inside the Seychelles EEZ respectively.

2.7. Industrial Longliners statistics by Access Regime

- During the year 2015 and 2014, industrial longliners licensed to operate inside of the Seychelles EEZ were operating under the two main fishing agreements; the Taiwan Deep-sea Tuna Longline Boat Owners and Exporters Association (TTA) and Top Fortune Agreement (TFI). It must be noted that all Seychelles flagged vessels were operating under the TFI agreement. Few vessels were also operating under private agreements.
- For the year 2015, Vessels operating under the National agreement accounted for 31% of the total EEZ catch whilst vessels operating under the TTA agreement represent 56% of the total EEZ catch. Vessels fishing under the Top Fortune agreement excluding all Seychelles flagged vessels represent 8% of the total EEZ catch in 2015. During the previous year, Seychelles flagged vessels accounted for 31% of the total catch inside the Seychelles EEZ whilst vessels operating under the TTA and TFI agreement accounted for 54% and 14% of the total EEZ catches respectively.

2.8. Landing and Transhipment Statistics

- The SFA has stepped up its effort to collect, capture and analyse landing and transhipment data of all Seychelles Flagged industrial longliners in all ports unloaded and is currently capturing such data in its database. However some data are still missing and hence landing and transhipment data will not be published in this report.

2.9. Fishing Ground

- Map 2A and 2B show the distribution of reported catch of industrial longliners by 1° square in the WIO for the years 2014 and 2015 respectively. Map 2C and 2D shows the distribution of reported catch of industrial longliners by 1° square in the WIO for the 1st Semester of 2014 and 2015 respectively whilst maps 2E and 2F shows the distribution of reported catch of industrial longliners by 1° square in the WIO for the 2nd Semester of 2014 and 2015.
- Maps 2B shows similar fishing pattern in 2015 when compared to the year 2014 (map 2A) with decreased catches of 'Other' Species 30° South. Similar observations were made for semester 1 (Map 2D) and semester 2 (Map 2F) of 2015 when compared to same period the previous year (Map 2C and 2E).

Semi - Industrial Longline Fishery

3. SUMMARY OF SEMI INDUSTRIAL FISHERY

3.1. Vessels Active and Trip Information

- Over the last 10 years, the number of vessels active in the semi-industrial longline fishery ranged between 4 to 11 vessels active per year and the total fishing trips spanned from 24 to 113 fishing trips with average trip duration of 10 days per trip (table 3.0).
- In 2016, a remarkable 164% increase in the number of vessels active in the semi industrial longline fishery was recorded when compared to the year 2015. A total of 29 vessels were active compared to 11 vessels during the previous year. This upsurge in number of vessel joining the fishery is mainly due to new technology imparted from Sri Lankan fishermen to local fishermen resulting in higher catches of tuna which has encourage local investors to join the fishery.
- In 2016, 29 semi-industrial longliners conducted a total of 252 fishing trips targeting tuna and swordfish representing a notable increase of 350% in number of trips over the 56 fishing trips conducted in 2015 by 11 vessels (table 3.0). The increase in number of trips may be attributed to the vessels switching back to longlining for tuna and swordfish due to availability of market for the export of the latter and due to new vessels joining the fishery.

3.2. Fishing Effort, Catches and Catch Rate

- The trend in semi industrial longline catches over the last 10 years shows that the total catch remained more or less constant for the period 2006 to 2008, then increased to reach a peak of 329 MT in 2009 and has since then been on a decreasing trend reaching a mere 82.1 MT in 2014 (figure 3A). However fishing effort has followed an increasing trend from 192,263 hooks in 2005 to a peak of 505,534 hooks in 2010, then dropped by 43% in 2011 and has since then been on the increase until 2014 where a significant 70% drop was observed in fishing effort. (figure 3B). The CPUE fluctuated between 2006 and 2008 and has since then has remained more or less constant over the last five years (figure 3C).
- In 2016, the Semi industrial fishery recorded the highest catch since the beginning of the fishery with a reported total catch of 970.8 MT based on only 90% logbook returned to SFA. This represent a remarkable increase of 399% over the 194.6 MT reported in 2015. This corresponds to a notable increase of 501% in fishing effort where a total of 1.2 million hooks were sets compared to 205,505 hooks sets in 2015 (table 3.0). The mean catch rate estimated for the year 2016 stands at 0.79 MT/ 1000 hooks compared to a mean catch rate of 0.95 MT/ 1000 hooks estimated for the previous year.

3.3. Species Composition

- Over the last 10 years Swordfish has remained the main target species of the semi-industrial longline fishery (figure 3D).
- However during the last two years, yellowfin tuna replaced swordfish as the dominant species caught by the semi-industrial Longline vessels were yellowfin tuna accounted for 57% of the total catch followed by swordfish and bigeye tuna accounting for respectively 20% and 13% of the total catch in 2016 respectively (figure 3E). During 2015 the semi industrial catches was dominated by yellowfin (50%) followed by swordfish and bigeye tuna representing 24% and 17% respectively (figure 3f).
- Significant increase was observed in catches of all species in 2016 when compared to the previous year. A record catch of 576 MT of yellowfin tuna was reported to have been caught by the semi industrial longliners in 2016, the highest yellowfin tuna catches recorded since the beginning of the fishery. This represents 488% increase over the 98 MT of yellowfin tuna reported for the same period the previous year. Swordfish and bigeye tuna also increased significantly from 47 MT and 33 MT in 2015 to 185 MT and 130 Mt respectively in 2016. It must also be noted that catches of marlin increased remarkably by 386% from 11 MT in 2015 to 53 MT in 2016.

4. SUMMARY OF ARTISANAL FISHERY

4.1. *Vessel Active*

- The historical trend shows a slight increasing trend in mean number of boats operating per month from the year 2006 to reach a peak of an average of 511 boats active per month in 2009. The mean number of boats active then decreased slightly the following year and has since then remained more or less constant averaging to 432 boats active per month during the last five years (Table 4.1A and Figure 22).
- In 2016, the mean number of boats operating per month in the artisanal fishery increased slightly from 445 boats in 2015 to 476 boats. In terms of vessel type, 75% of the fleets were outboard vessels and 20% were whalers. In 2015 outboard and whalers accounted for 69% and 21% of the fleet respectively. The number of semi industrial longliners conducting fishing trips targeting demersal fish stood at an average of 3 vessels active per month compared to an average 5 vessels for the same period the previous year (Table 4.1B). It was observed that during the second quarter of the year, all semi industrial longliners switched back to longline fishery targeting tuna and swordfish.

4.2. *Catch Statistic by Vessel Type*

- Time series of catches shows that between 2006 and 2008 total catch by artisanal boats remained more or less constant averaging to 4,273 MT per year. In 2009 the artisanal catches dropped by 37% and have remained more or less the same for the following 3 years with an average of 2,658 MT per year between 2010 and 2012 (Table 4.2 and Figure 4A). This may have been due to piracy threat in the Indian Ocean. During 2013, the artisanal total catch increased considerably by 66%, returning to the pre-2009 level where a total of 4,150 MT of fish was landed. Since then the catches has been on a decreasing trend.
- In 2016, the total artisanal catches dropped by 22% to 2516 MT from 3,214 MT in 2014, out of which 80% was landed on Mahe and 20% was landed on Praslin and La Digue. The decreased in catches could well be attributed to the continued ice shortage experienced by fishermen during the year of 2016 (figure 4A).
- For the whole of 2016, whalers and outboard accounted for 38% and 52% of the total artisanal catches respectively whilst schooners accounted for 98% of the total catch. In 2015, whaler, outboard and schooners accounted for 40%, 45% and 8% of the total artisanal catches respectively (Table 4.2A).
- For the whole of 2016, a significant decreased of 95% was observed in catches by Semi-industrial longliners conducting trip targeting demersal species since all semi industrial vessels switched back to targeting tuna and swordfish after the first quarter of the year. Fishermen on foot recorded an 11% increase in catches whilst all other vessel type recorded a decrease in catches.

4.3. *Catch Statistics by Gear Type*

- Trend analysis of catches by gear type shows that handline fisheries historically dominated artisanal catches followed by encircling gillnet (Table 4.3 and Figure 4C).
- Typical of previous years, the handline fishery dominated artisanal fisheries catches, accounting for 60% of total landings in 2016 followed by encircling gillnet (18%) and static trap (12%). Total catch by handline for the year 2016 is estimated at 1,502 MT representing a 22% decrease from the 1,921 MT estimated for 2015.
- In 2016, decreased in catches were also observed by encircling gillnet (34%) and by ‘Other’ gear (71%). Catches by harpoon, active and static trap increased by 44%, 97% and 12% respectively when compared to the previous year. Catches by handline and traps also increased by 24%.

4.4. *Catch Statistics by Species*

- Between 2005 and 2013, artisanal catches has been dominated by carangues, bourgeois, job and maquereau doux accounting on average 24%, 17%, 14% and 9% of artisanal catch per year respectively (Table 4.4). Trend analysis shows that over the last five years, catches of carangues and job has fluctuated between years, catches of bourgeois has been on a declining trend whilst catches of maquereau doux has been on the increase (Figure 4D – 4I).
- During the year 2016, significant increase were recorded for cordonier (40%), maconde(25%), Sharks and rays (16%) and crab(38%). All other species recorded decrease in catches with highest decreased recorded in other pelagic (84%), other vielle (61%) and maquereaux doux (58%) when compared to the previous year.
- The most important species groups landed for the whole of 2016 were carangues (29%), cordonier (12%), maquereau doux (9%) and job (9%) almost similar to the previous year where the artisanal catches were dominated by carangues (26%), maquereau doux (17%) and job (11%) (Figure 4K).

4.5. *Fishing Effort by Vessel Type and Gear Type*

- Time series of effort shows that between 2005 and 2008 total effort by artisanal boats conducting handline fishery remained more or less constant averaging to 59,033 man days per year. Between 2009 and 2012 the handline fishery effort has been on a decreasing trend. (Table 4.5 and Figure 4M). Fishing effort for trap fishery has remained more or less constant over the last 10 years (Figure 4N). For net fishery, the fishing effort has remained more or less constant between the period 2007 to 2011 and has since then been on the increase (Figure 4O).
- In 2016, the total effort for handline fishery decreased by a 30% from an estimated total of 50,604 men days in 2015 to an estimated at 35,286 men days. Fishing effort by pirogue increased by 31% whilst fishing effort by outboard, whaler and schooner in the handline fishery decreased by 6%, 0% and 41% respectively when compared to the previous year.

- The estimated effort for trap fishery increased by 10% when compared to the previous year. The fishing effort for trap is estimated at 81,953 traps sets in 2016 compared to 74,693 traps set in 2015. A remarkable increase of 129% was recorded by whaler and a 10% increase in number of traps sets was estimated by outboard. A 75% and 49% decrease was estimated by Pirogue and fishermen on foot in the trap fishery in 2016 when compared to the year 2015.
- The net fishery record an increase of 18% in fishing effort in 2016 when compare to the previous year. A total of 2,564 net were set in 2016 compared to 2,171 net set the previous year. Pirogue net fishery record a 34% decreased in fishing effort whilst outboard net fishery recorded a 25% increase in net set in 2016 when compared to the previous year.

4.6. *Catch Rate by Vessel Type and Gear Type*

- Time series of catch rate shows that between 2005 and 2014, catch rate by artisanal boats conducting handline fishery has remained more or less constant to 54.7 kg/man day (Table 4.6 and Figure 4S). CPUE for trap fishery has been on the decreasing trend from 2005 to 2009 and has since then remained stable (Figure 4T). CPUE for net fishery has remained more or less constant over the period 2006 to 2011 and has since then been on the increased (Figure 4U).
- The catch rate for handline fishery increased from 39.7 kg/ men day in 2015 to an estimated 45.7 kg/ men day in 2016. Increased in handline catch rate were observed by outboard, whaler and schooner vessels whilst pirogue recorded a slight decrease in catch rate in 2016 when compared to the previous year.
- CPUE for the trap fishery is estimated at 6.0 kg/ trap in 2016 compared to 5.3kg/ trap in 2015 with the highest catch rate recorded by fishermen on foot where an estimated 11.5kg/trap were recorded compared to 4.9kg/trap in 2015. Outboard trap fishery recorded a slight increase in catch rate in 2016 whilst pirogue and whaler trap fishery recorded decrease in catch rate.
- Significant decrease was estimated in catch rate in the net fishery in 2016 where the catch rate drop from 320.1 kg/set in 2015 to 178.8 kg/set in 2016. Significant drop in catch rate was observed for both pirogue and outboard net fishery (Table 46).

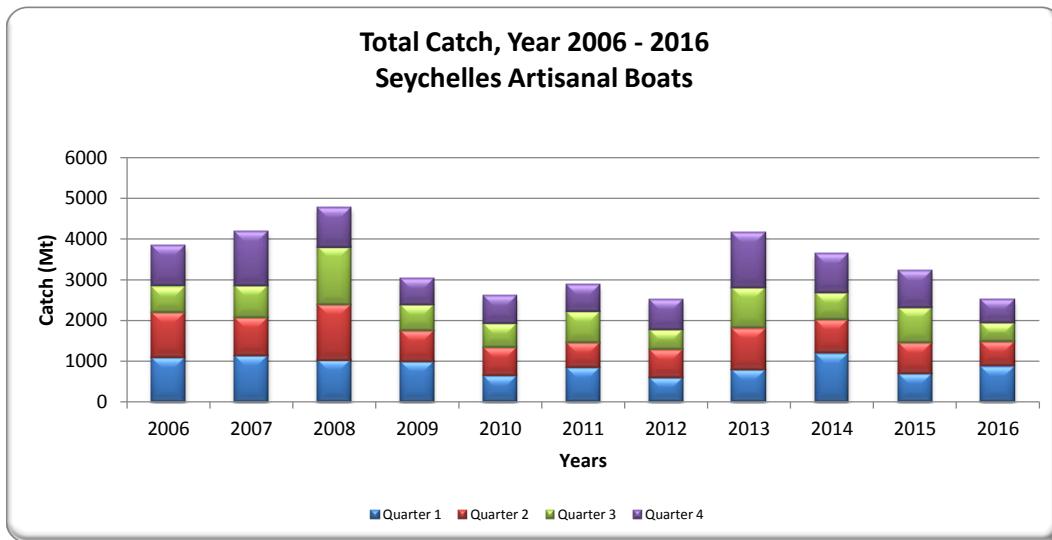

Figure 4A: Artisanal fishery Total Catch, Years 2006 - 2016

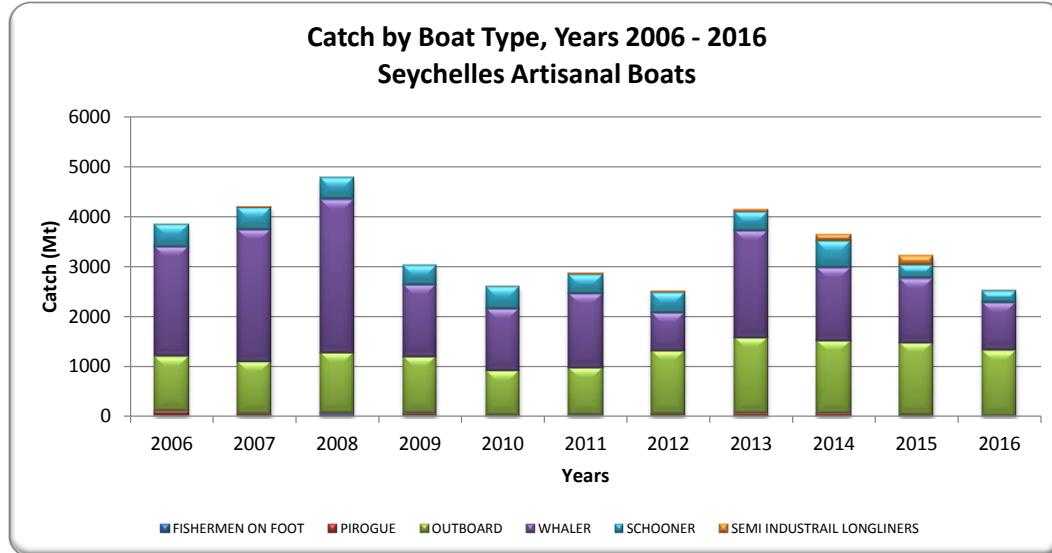

Figure 4B: Artisanal fishery Catch by Vessel Type, Years 2006 - 2016

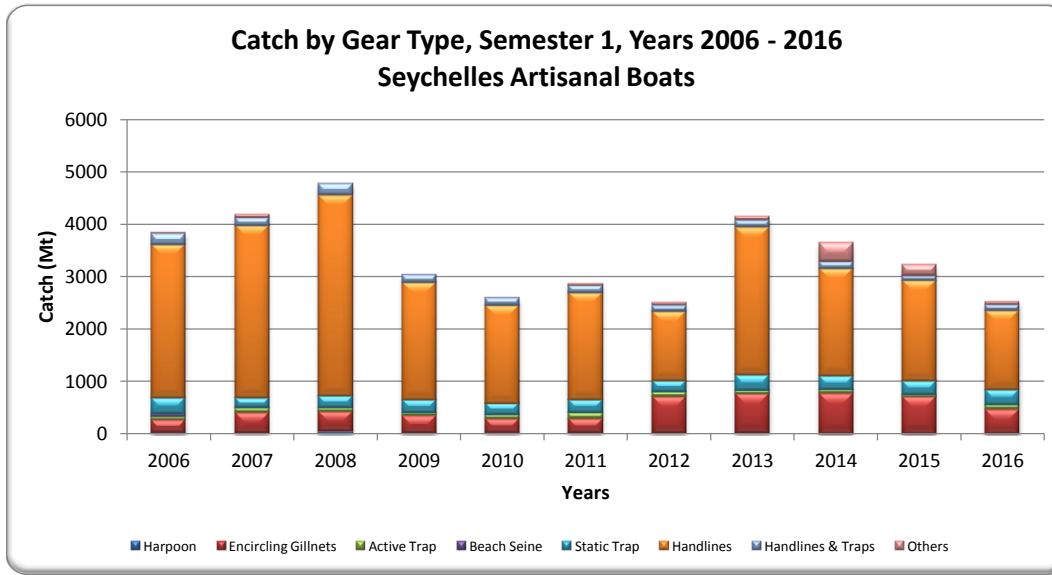

Figure 4C: Artisanal fishery Catch by Gear Type, Years 2006 - 2016

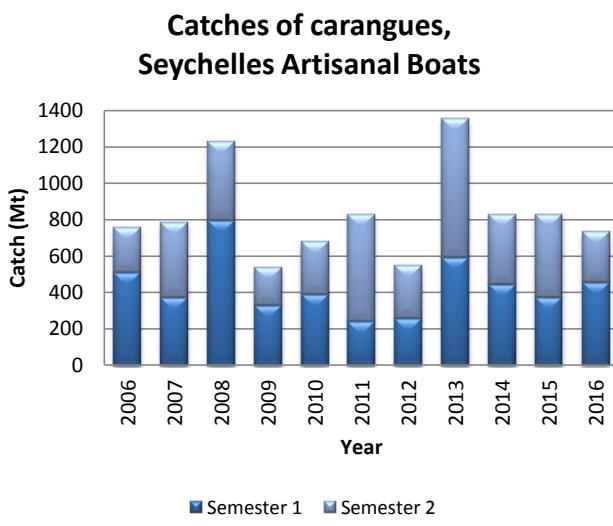

Figure 4D: Catches of Carangues, Years 2006-2016

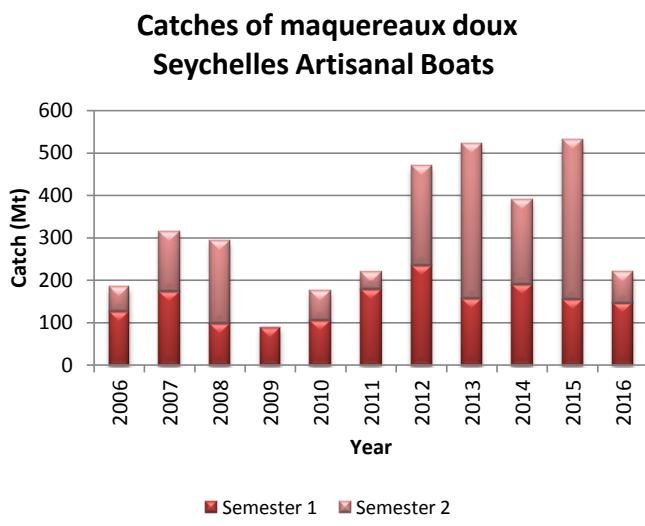

Figure 4E: Catches of Maquereau doux, Years 2006-2016

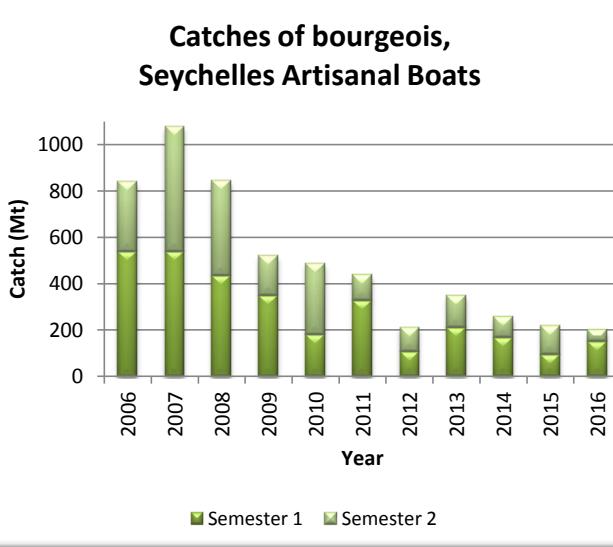

Figure 4F: Catches of bourgeois, Years 2006-2016

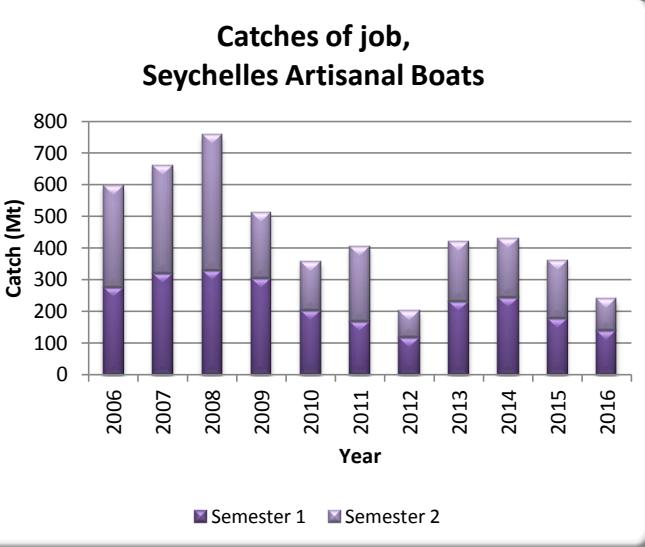

Figure 4G: Catches of job, Years 2006-2016

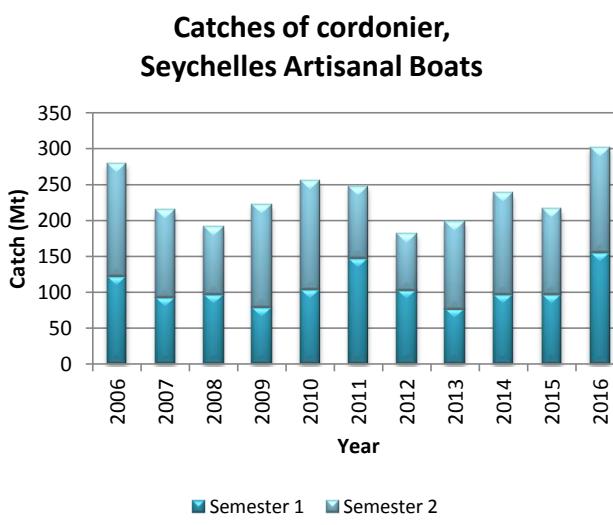

Figure 4H: Catches of cordonier, Years 2006-2016

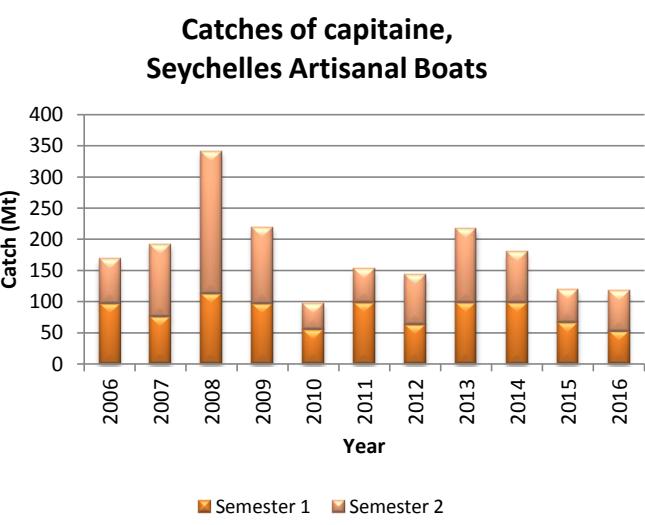

Figure 4I: Catches of capitaine, Years 2006-2016

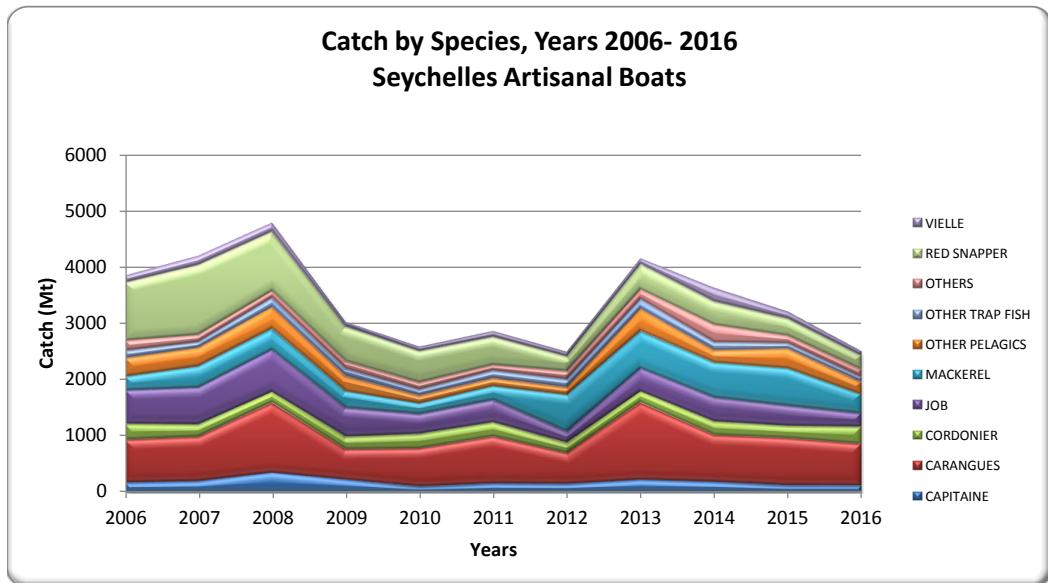

Figure 4J: Artisanal fishery Catch by Species, Years 2006 - 2016

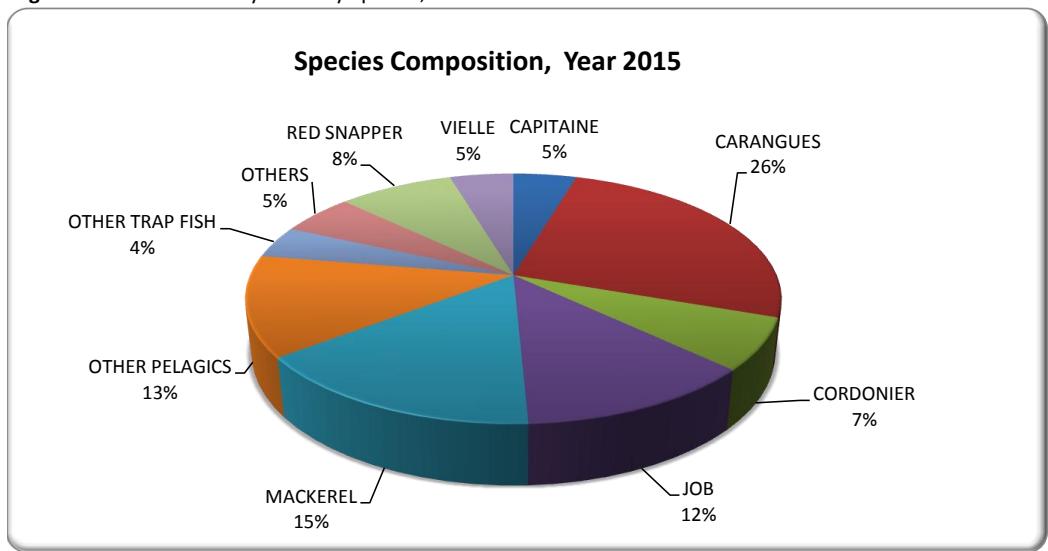

Figure 4K: Artisanal fishery Species composition of catches, Year 2015

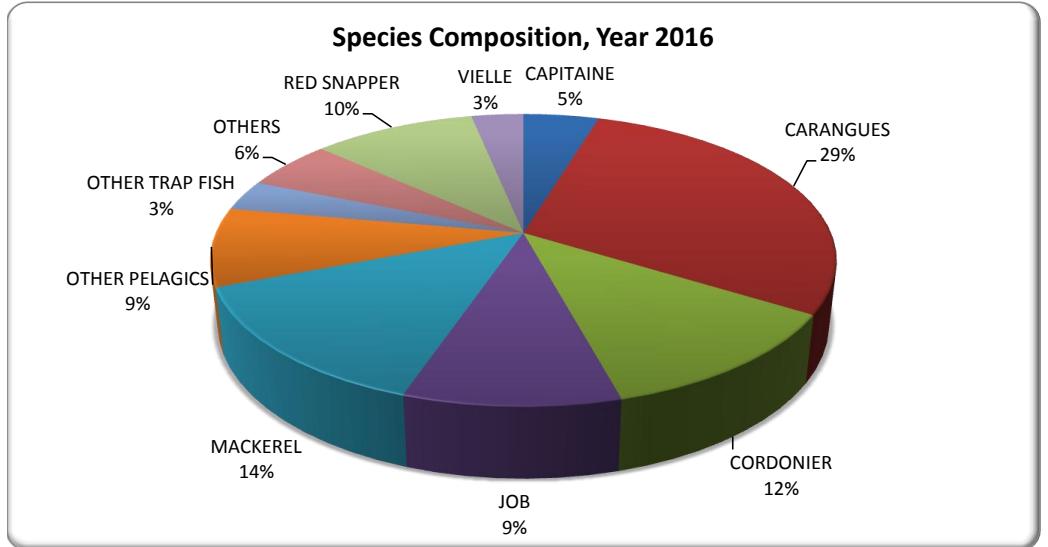

Figure 4L: Artisanal fishery Species composition of catches, Year 2016

Fishing Effort, Handline Fishery, Years 2006 - 2016
Seychelles Artisanal Boats

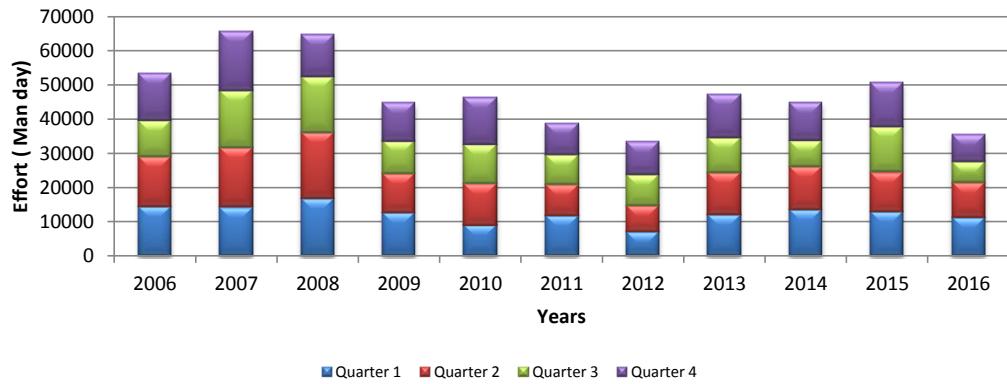

Figure 4M: Artisanal handline fishery, fishing effort, Years 2006 - 2016

Fishing Effort, Trap Fishery Years 2006 - 2016
Seychelles Artisanal Boats

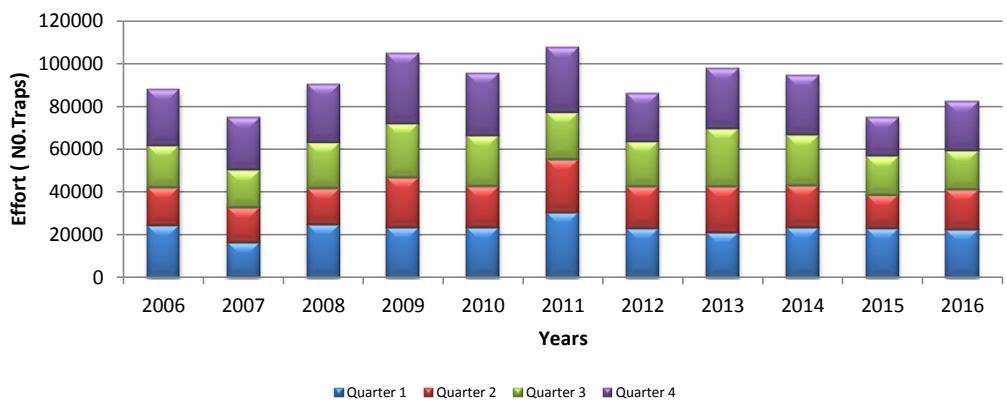

Figure 4N: Artisanal trap fishery, fishing effort, Years 2006 - 2016

Fishing Effort, Net Fishery , Years 2006 - 2016
Seychelles Artisanal Boats

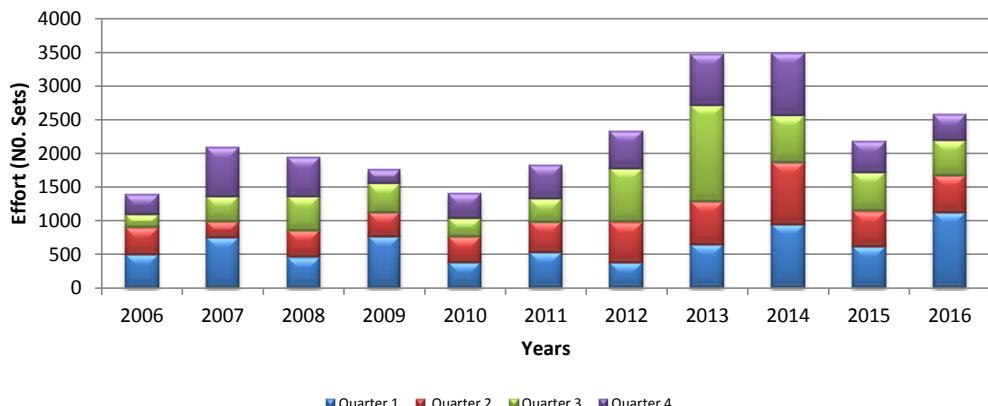

Figure 4O: Artisanal net fishery, fishing effort, Years 2006 - 2016

Fishing Effort, Handline Fishery by Vessel type Years 2006 - 2016
Seychelles Artisanal Boats

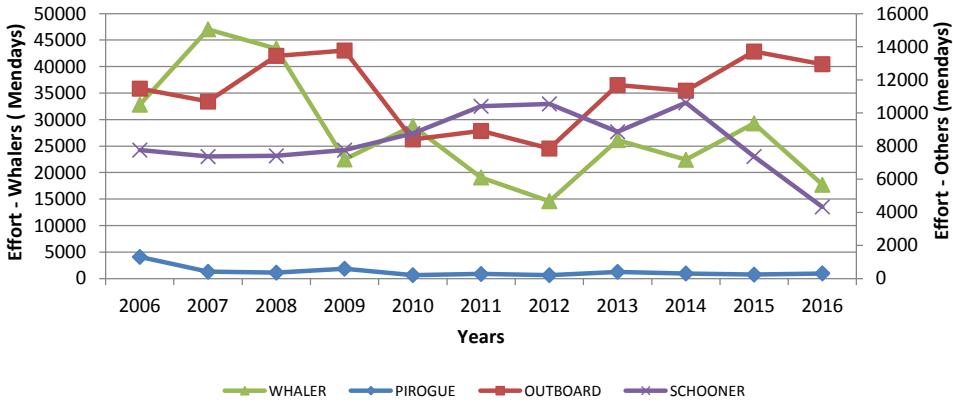

Figure 4P: Artisanal handline fishery, fishing effort by vessel Type, Years 2006 - 2016

Fishing Effort, Trap Fishery Years 2006 - 2016
Seychelles Artisanal Boats

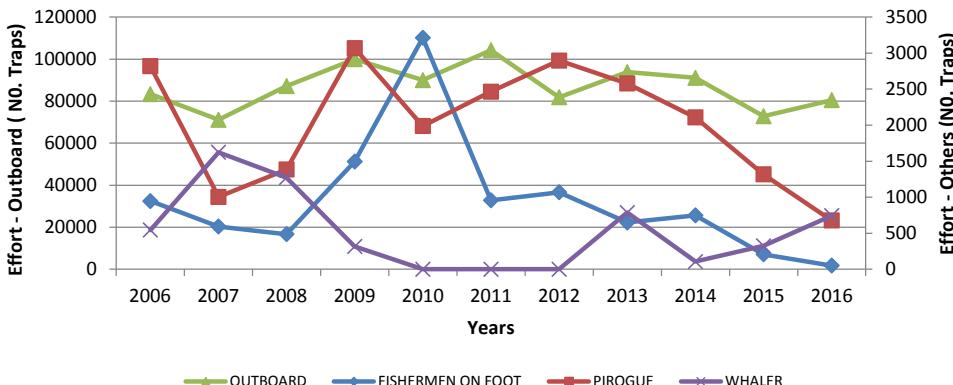

Figure 4Q: Artisanal trap fishery, fishing effort by vessel type, Years 2006 - 2016

Fishing Effort, Net Fishery, Years 2005 - 2015
Seychelles Artisanal Boats

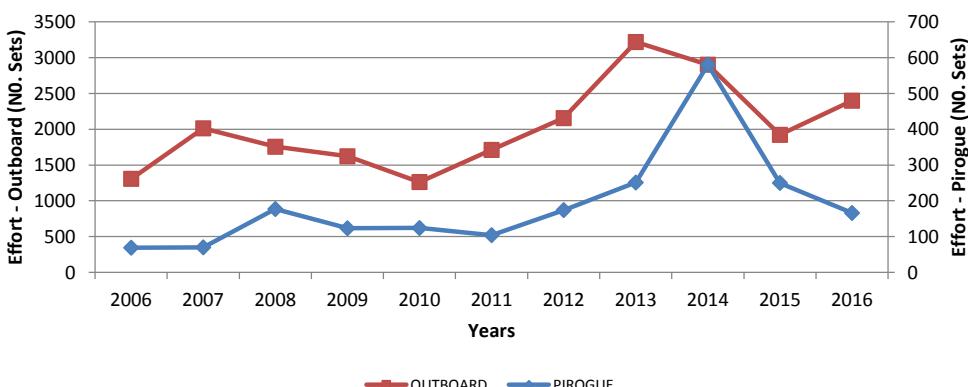

Figure 4R: Artisanal net fishery, fishing effort by vessel Type, Years 2006 - 2016

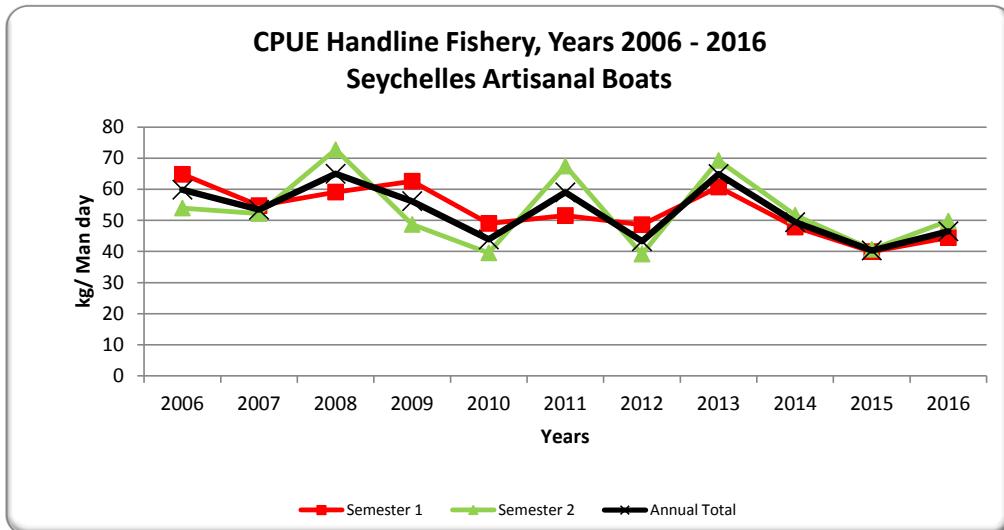

Figure 4S: Artisanal handline fishery CPUE, Years 2006 - 2016

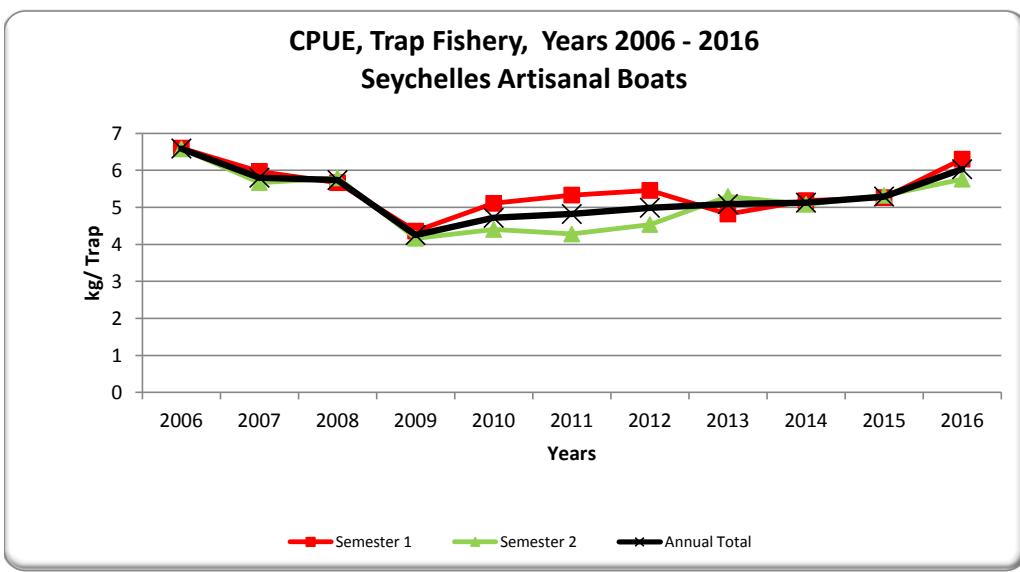

Figure 4T: Artisanal trap fishery CPUE, Years 2006 - 2016

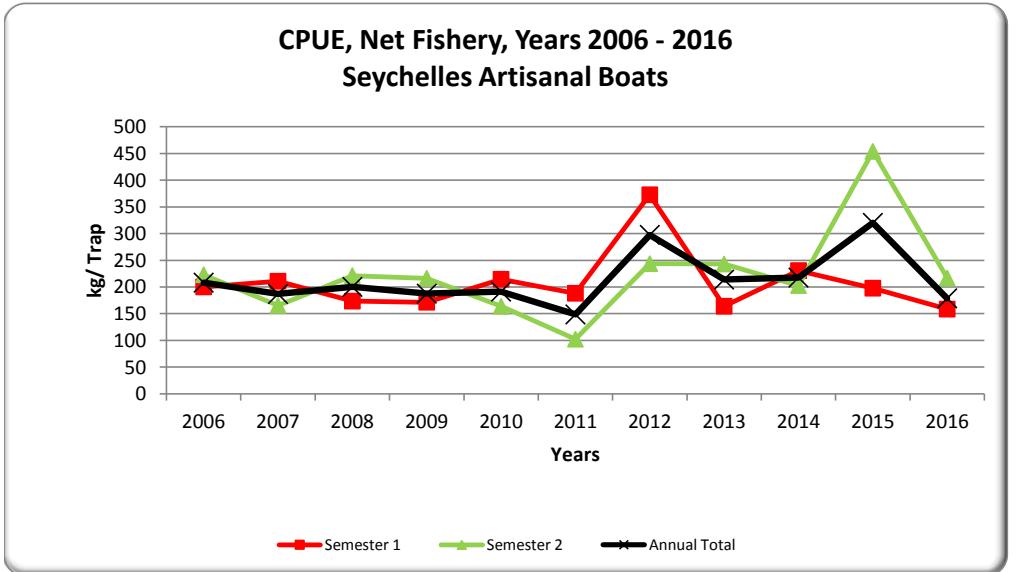

Figure 4U: Artisanal net fishery CPUE, Years 2006 - 2016

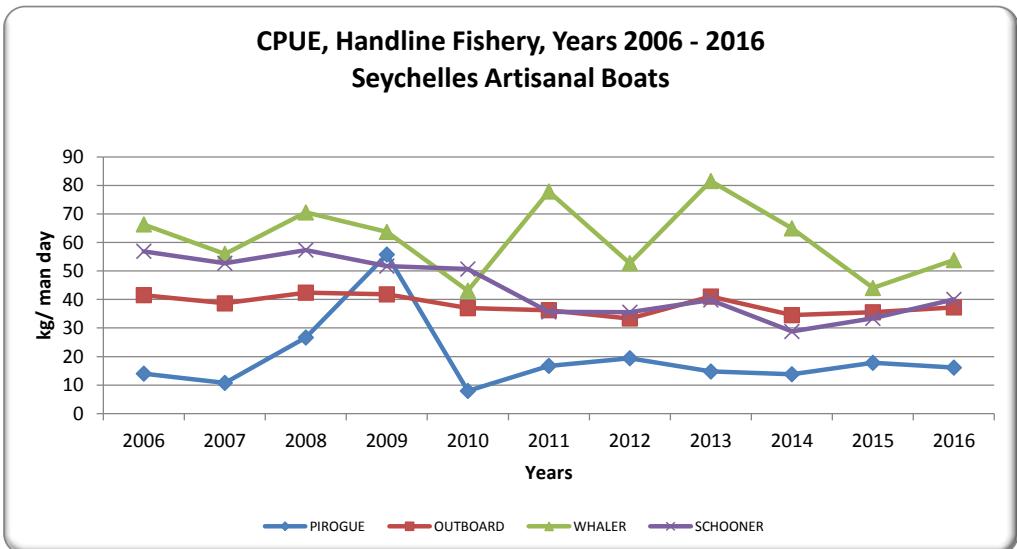

Figure 4V: Artisanal handline fishery CPUE by vessel Type, Years 2006 - 2016

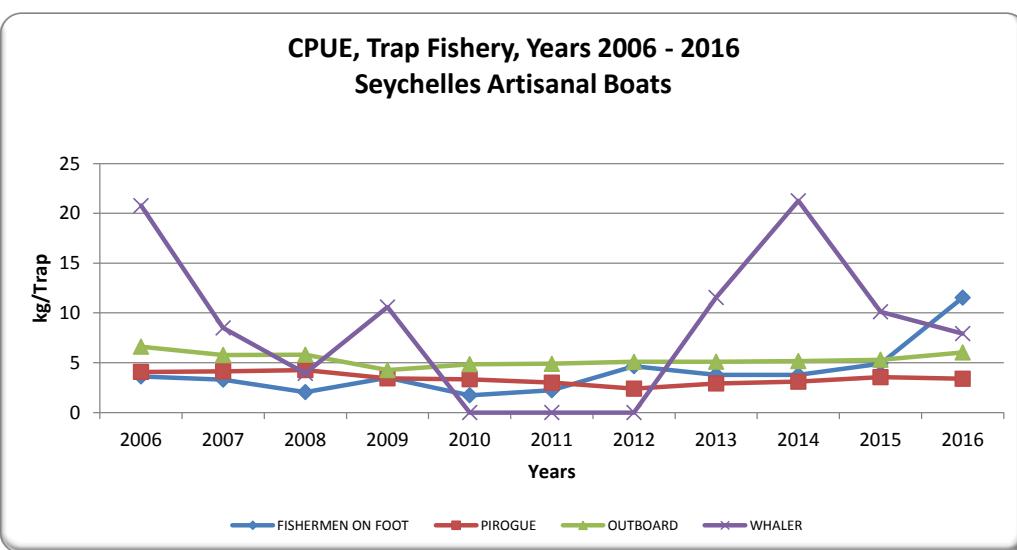

Figure 4W: Artisanal trap fishery CPUE by vessel type, Years 2006 - 2016

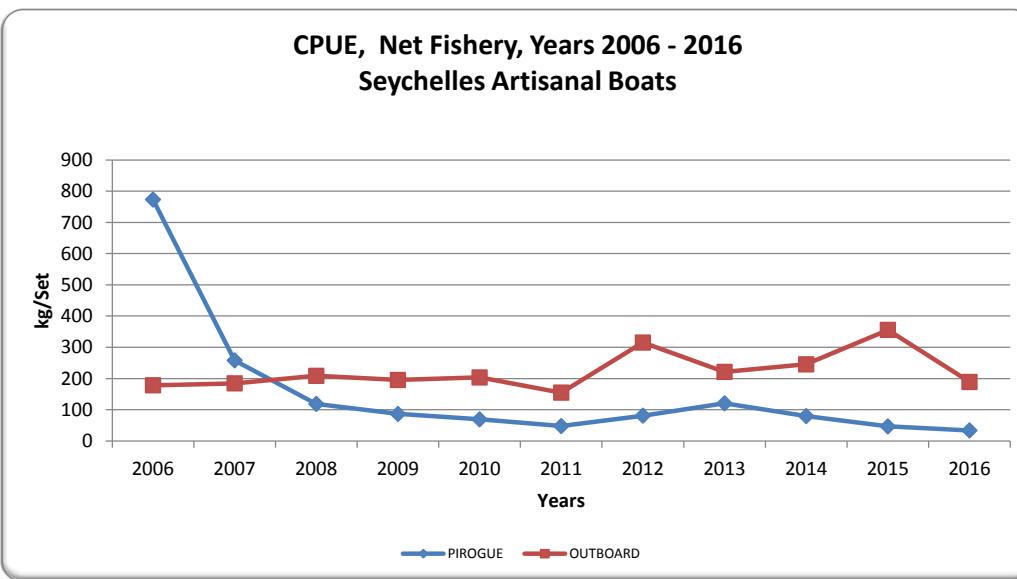

Figure 4X: Artisanal net fishery CPUE by vessel Type, Years 2006 - 2016
