Fisheries Statistical Report

Report

Semester 1, 2014

Fisheries Statistical Report

Semester 1

Year: 2014

SEYCHELLES FISHING AUTHORITY

P.O. Box 449, Fishing Port, Mahé, Seychelles, Tel: 4 670300, Fax: 4 224508,
Email: management@sfa.sc, Website: www.sfa.sc

Introduction

The Seychelles Fishing Authority (SFA) was incorporated in August 1984 by the Seychelles Fishing Authority (Establishment) Act. This body was formed in view of the need to develop the fishing industry to its fullest potential. It is a parastatal organization with autonomous legal and financial status, supervised by a board of directors appointed by the President.

The Ministry of Natural Resources is responsible for policy directives in fisheries related matters, and SFA is the executive arm of the government in all fisheries activities. Responsibilities include:

- assessment and management of the fisheries resources;
- assistance in conducting negotiations with foreign fishing fleet operators;
- coordination and support of fishing ventures and owner/operators;
- management of the fishing port;
- development of gear technology;
- coordination of manpower training in the fishing sector;

This report will provide statistical and economic information of key fisheries of the Seychelles and will be published bi-annually. This volume contains fisheries statistics for purse seine, industrial longline, semi industrial longline and artisanal fishery in addition to fisheries statistics in port Victoria and fisheries export information. In future edition, this report will also be updated with statistics of imports of fisheries related products so as to have a comprehensive bulletin of fisheries related statistical and economic information.

NOTES

This Statistical bulletin presents statistics for purse seine fishery, semi industrial longline fishery, artisanal fishery, vessel port activities and expenditures, and fisheries export for the year 2013 and up to first semester of 2014. The figures presented for the industrial longline fishery are for years 2012 and 2013.

It must be noted that all figures published for first semester of 2014 and all figures for industrial Longliners for the year 2013 are preliminary as not all data were received and/or captured in the database at the close of the database for processing. Readers must note that whilst SFA do its utmost to receive up to date information, sometimes there are delays in receiving these information.

Data used to generate the tables and figures for industrial and semi industrial fishery presented here are based on daily catch and effort forms (logbooks) and landing and transhipment forms returned from fishing vessels that are licensed to fish in the Seychelles EEZ as well as from data collected via the tuna sampling programme conducted during unloading in Port Victoria. Sometimes there are delays in these being received at SFA, especially for longliners that often spend up to a year at sea, and for purse seiners the delays are usually during and just after the second quarter of the year when most vessels are fishing in the Mozambique Channel and are not necessarily using Port Victoria for transhipment.

Figures presented on vessel port calls and expenditures in port Victoria are based on data collected from Seychelles Port Authority and shipping Agents respectively whilst export figures are generated from data sourced from the National Bureau of Statistics, invoices from local processors and export permit from Ministry of Finance.

For vessel expenditures, port calls and exports, the figures presented in this bulletin may be different to previously published because these figures have been revised following thorough verifications carried out on the data that had recently been transferred into a new updated database.

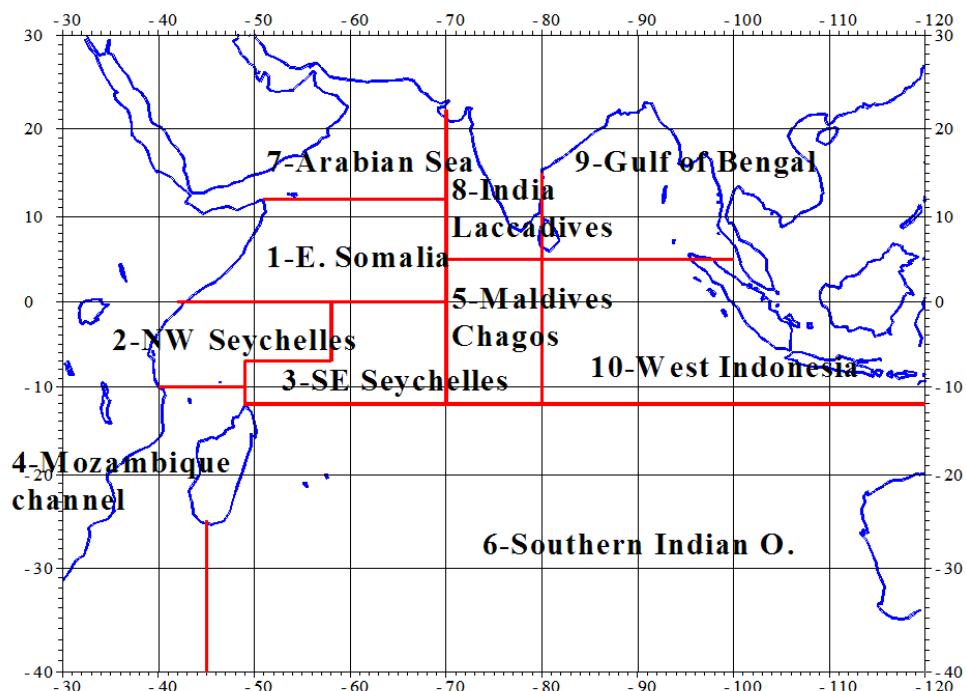

Readers should note that some of the figures presented may be subject to revision (usually upwards) as more data become available.

Since space is a limiting factor in some tables, flag country appearing in these tables is included based on their total catch. The remaining flags are classified under "OTHERS". Flag countries with only one vessel are automatically placed under "OTHERS" to preserve the confidentiality of data pertaining to the vessel.

Purse Seine Fishery:

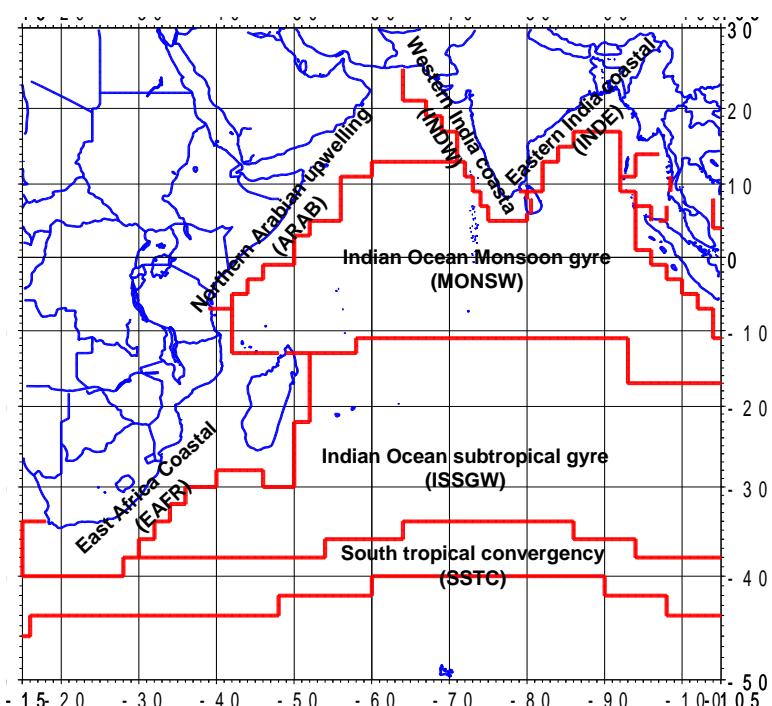

- The purse seiner's figures for 2013 have been finalised in this report compared to the previously published.
- Readers should note that the catch composition recorded by fishermen in their daily catch and effort reports were corrected based on scientific sampling carried out during transhipment or landing in Port Victoria.

- Total tuna transhipped for Port Victoria refers to the total amount of fish transhipped from purse seiners to reefers or to containers, whereas those landed are amount of fish landed in the port for further processing or sale.
- Vessels covered refer to vessels for which a logbook has been received and processed.
- The total number of vessels licensed and covered may not correspond to the direct summing of number of vessels licensed or vessel covered by countries by month. The reason for this is that a vessel may change licence from one country to another in the same month, hence counted under both countries for that particular month.
- Where a trip is spread over two different years, e.g. December 2013 - January 2014, the catch up to December 2013 will be attributed to 2013 and the catch made in January 2014 will be attributed to 2014. However the transhipment/ landing will be attributed to the year 2014 when that transhipment/ landing occur. Hence the difference between the total catch for the year and the total catch transhipped/ landed.
- Maps showing the Zones of Indian Ocean for Purse seine fishery

Industrial Longliners Fishery:

- For industrial longliners, only catch statistics for the year 2012 and 2013 have been incorporated in this volume since data entered into the database for the year 2014 was very low for processing. It must be noted though that the statistics presented for the year 2012 are based on 83% of logbook returned to SFA whilst for 2013, the figures are for only 57% of the logbooks returned.
- Since the duration of licenses can vary from one month to twelve months, for comparison purposes, each month covered in a logbook was considered as one logbook.
- Readers should be aware that the longliners statistics represent only a small sample of longliners activity in the WIO because:
 - Not all longliners in the WIO have a license to fish in the Seychelles EEZ and therefore are under no obligation to report to SFA. Unlike purse seiners who provide details of all activities inside and outside the Seychelles EEZ, longliners are under obligation to provide data for activities only inside of the Seychelles EEZ unless they are Seychelles registered vessels who are obliged to provide detail of all their activities.
 - Some Distant Water Fishing Nations (DWFN) provide SFA with log sheets covering their activity in the whole Indian Ocean while others confine their reports to the Seychelles EEZ only.
- Maps showing the Zones of Indian Ocean for Longline fishery.

Longhurst areas

Artisanal Fishery:

- The catches for artisanal fishery presented here may be slightly different to previously published figures since data previously published as dropline catches has been revised and published as 'Others' to include catches for gears not previously captured by the Artfish software notably dropline, reels and hoop tangled net. Such gears are mostly used by schooner vessels and Semi industrial longliners conducting artisanal fishing trips. Hence the catches for schooners may be slightly different to that previously published.

Definitions of terms used

TERMS	DEFINITION
EEZ	Exclusive Economic Zone
WIO	Western Indian Ocean
NEI	Not elsewhere included
VESSELS LICENSED	Vessels licensed to fish in the Seychelles EEZ.
VESSELS COVERED	Vessels for which a logbook has been received containing at least one fishing day during the month; or a vessel that is not fishing yet the SFA knows of its activities.
FISHING DAYS	Days spent at sea minus days on passage, days adrift due to mechanical breakdown or other work stoppage. This may include days spent in searching even if no fish was actually caught or days spent drifting.
CATCH	MT - Metric Tonne (1000 kg)
CATCH RATE	Total Catch per fishing effort.
TRANSSHIPMENT	Generally the transfer of tuna fish from a catcher vessel to a 'reefer' or cargo vessel. This normally takes place in port.
LANDING	This also includes fish landed in Port Victoria, Seychelles for the IOT canning factory. Most of this is subsequently re-exported.
COUNTRY OF REGISTRATION	Country in which ownership of the vessel is registered.
FLAG	Country and agreement under which the vessel is managed.

Purse Seine Fishery

1. SUMMARY OF PURSE SEINE FISHERY

1.1. Vessels Licensed and Active

- During the year 2013, a total of 39 purse seiners were licensed to fish inside of the Seychelles Exclusive Economic Zone compared to 38 vessels the previous year (table 1.2). There was a decrease of 3 vessels in the EC fleet whilst vessels licensed to fish under other agreement increased from 6 vessels in 2012 to 10 vessels in 2013.
- During the first semester of 2014 an average of 41 purse seiners were licensed per month with an average of 37 vessels active compared to an average of 35 vessels licensed and 33 vessel active during the same period in 2013 (table 1.2A and 1.2B).
- It must be noted that during the first semester of 2014, five vessels changed flag from Mayotte to France and one vessel changed flag from Spain to Seychelles, thus increasing the average number of vessels licensed under the EC agreement from 22 vessels during the first semester of 2013 to 27 vessels during the same period in 2014.

1.2. Fishing Effort, Catches and Catch Rate in WIO

- Based on logbook received at the SFA, the total catch in the Western Indian Ocean reported by purse seiners holding licences to fish inside the Seychelles EEZ for 2013 was estimated at 277,879 MT representing an increase 20% (46,402 MT) over the total catch of 231,477 MT recorded in 2012 (Table 1.3 and figure 1). Overall, following a drop of 37% in catches in 2007, the purses seine catches has since then remained more or less constant.
- The fishing effort in 2013 was estimated to be 10,184 fishing days, representing a slight increase of 5% from 9696 fishing days in 2012 (figure 2). The mean catch rate (CPUE) for 2013 stands at 27.29 MT/fishing day, compared to 23.87 MT/fishing day for the year 2012. The CPUE over the past 4 years has remained consistent (figure 3).
- Provisional estimates for purse seine tuna catches in the Western Indian Ocean during the first semester of 2014 is 121,489 MT achieved by an average of 37 vessels active per month. The total effort reported for that period was 5,002 fishing days, thus giving a mean catch rate of 24.29 MT/ fishing day (table 1.3A).
- The total catch reported by purse seiners licensed to fish in Seychelles waters during the same period of the previous year, was 124,204 MT obtain from a fishing effort of 4,802 fishing days, thus giving a mean catch rate of 25.87 MT/ fishing day. Hence the catch and catch rate for the first semester of the year has remained steady over the past three years (table 1.3).
- Analysis of the monthly catch and effort for January to June 2014 (table 1.3A) shows that higher catches were recorded during the month of January whilst during the same period in 2013, March was the month with the highest reported catch.

1.2.1. Fishing Effort, Catches and Catch Rate in WIO by Fleet

- Analyses by fleet shows that during the first semester of 2014, the Seychelles fleet reported a total catch of 20,462 Mt compared to 24,922 Mt during the same period in 2013 representing a decrease of 18% which relate to a decrease of 16% in fishing Effort (table 1.3b).
- From January to June 2014 the Spanish fleet reported a total catch of 59,865 Mt compared to 63,183 Mt during the same period of the previous year, representing a slight decrease of 5% in catches (table 1.3c).
- The estimated catch for the French fleet increased significantly by 54% during the first semester of 2014 which could be attributed to the 5 vessels which changed flag from Mayotte to France during that period. A total catch of 28,940 Mt was reported for that period compared to 18,789 Mt during the first semester of 2013 (table 1.3D).
- The remaining 12,221 Mt of tuna caught for the first semester of 2014 were taken by vessels from other countries, representing a decrease of 29% over 17,310 Mt recorded during same period in 2013 (table 1.3E).
- As has been the case historically catches by purse seiners during the first semester of 2014 was dominated by the Spanish fleet accounting for 49% of the total catch whilst the French and Seychelles fleet accounted for 24% and 17% respectively. During the same period the previous year the Spanish, Seychelles and French fleet accounted for 51%, 20% and 15% of the total purse seine catches in WIO respectively.

1.3. Species Composition of Catches in WIO

- Figure 7 shows the percentage distribution of each species caught by purse seiners to the total catch. Historically Skipjack tuna dominated the purse seine catches in the Western Indian Ocean (table 1.3). However for the past two years, yellowfin replaced skipjack tuna as the dominant species caught, accounting for 49% of the total catch in 2013. Skipjack and bigeye tuna accounted for 42% and 9% of the total catch, respectively. Compared to 2012, the catches of yellowfin, skipjack and bigeye tuna all rises by of 3%, 42% and 46% respectively.
- During the first semester of 2014, yellowfin tuna was the dominant species caught by purse seiners in WIO accounting for 51% of the total catch, whilst skipjack tuna made up 40% of the total catch (table 1.3A). The catch for yellowfin tuna increased by 3% for the first six months of 2014 whereas skipjack and bigeye tuna catches decline by 5% and 15% respectively.
- During the same period in 2013 yellowfin and skipjack tuna accounted for 49% and 41% respectively.

1.4. Activity inside the Seychelles EEZ

- The total catch reported by purse seiners inside the Seychelles EEZ during the whole year 2013 was estimated at 36,101 MT representing a decrease of 37% (21,430) from the 57,531 MT reported for the year 2012 (table 1.4 and figure 4). The decrease in catches inside the Seychelles EEZ corresponds to a decrease of 28% in fishing effort (figure 5). The fishing effort recorded during 2013 was 2,247 fishing days giving a mean catch rate of 16.07 MT/fishing day compared to 18.33 MT/fishing day in 2012.
- The CPUE trend inside the Seychelles EEZ from 2004 to 2010 (figure 6) shows similar pattern to the overall WIO CPUE (figure 3). The catch rate inside the EEZ drop from 24.55 MT/fishing day in 2004 to 12.33 MT/fishing day 2007 and then increased to 24.45 MT/fishing day in 2010. Since then CPUE inside the Seychelles EEZ has since then been on a downward trend.
- The purse seine tuna catch reported inside the Seychelles EEZ during the first semester of 2014 is estimated at 29,017 MT (table 1.4A) achieved by an average of 37 vessels active per month and a fishing effort of 2,002 fishing days, thus giving a mean catch rate of 14.50 MT/ fishing day.
- During the same period, the previous year a total of 23,674 MT of tuna were reported to have been caught by purse seiners inside the Seychelles EEZ obtain from a fishing effort of 1,329 fishing days, thus giving a mean catch rate of 17.82 MT/ fishing day. This represents an increase of 23% in total catch, over the same period of the previous year corresponding to an increase of 51% in fishing effort inside the Seychelles EEZ.
- The monthly trend in CPUE shows that the CPUE inside the Seychelles EEZ was higher in January during the first semester of both 2014 and 2013.

1.4.1. Fishing Effort, Catches and Catch Rate inside the Seychelles EEZ by Fleet

- During the first semester of 2014, The Seychelles fleet reported the least catch inside the Seychelles EEZ accounting for only 7% of the total EEZ catch. The fleet estimated catch stands at 2,038 MT compared to 3,622 Mt during the same period the previous year thus declining by 44% (table 1.4B). The catch rate for the Seychelles fleet is estimated at 12.27 MT/ fishing day in contrast to 19.55 MT/ fishing day from January to June 2013.
- The French fleet accounted for 51% of the total catch inside the Seychelles EEZ with a reported catch of 14,778 MT from a fishing effort of 977 fishing days and a mean catch rate of 15.13 MT/ fishing day (table 1.4 D). This represents a significant rise of 181% in EEZ catches by the fleet over the 5,260 MT reported during the same interval in 2013.
- The Spanish fleet reported EEZ catch drop by 9% from 10,100 Mt from January to June 2013 to a total catch of 9,167 Mt during the same period in 2014 (table 1.4C) thus accounting for 32% of the total EEZ catch for the first semester of 2014.
- Vessels from other fleet reported a 3,085 MT or 11% of catches inside the Seychelles EEZ during

the first semester of 2014 compared to 4,692 or 10% of EEZ catch in during the same period the previous year(table 1.4E).

1.5. Statistics of Seychelles Flagged Vessels

- The Seychelles flagged purse seiners reported an estimated catch of 57,324 MT in the WIO during the year 2013 where 77% or 44,181 MT of its catches were on the high seas. Only 12% or 6,647 MT of the Seychelles fleet catches were reported to have been caught inside of the Seychelles EEZ (table 1.5).
- During the first Semester of 2014, the Seychelles flagged purse seiners reported an estimated catch of 20,462 Mt in the WIO representing an 18% drop in catches corresponding to a 16% drop in fishing effort when compared to a total catch of 24,922 Mt reported during the same period , the previous year.
- From January to June 2014, the Seychelles flagged purse seiners reported to have caught 79% of the total catch or 16,229 MT of tuna on the high Seas and 11% of their catches or 2,195 MT in foreign EEZ. The remaining 10% or 2,038 MT were reported to have been caught inside the Seychelles EEZ.
- During the same period the previous year, 63% (15,672 MT) and 23% (5628 MT) of the Seychelles flagged purse seiners tuna catches were caught on the high Seas and in Foreign EEZ respectively.

1.6. Purse seine statistics by Access Regime

- During the first semester of 2014, purse seiners licensed to operate inside of the Seychelles EEZ were operating under the National or Seychelles flag agreement, the European Community (EC) agreement and under individual agreement with Korea and Mauritius hereafter group as 'Others'. It must be noted that all vessels under previous agreement with Mayotte change to EC agreement on 1st January 2014.
- For the first half of 2014, vessels fishing under the EC agreement reported a total catch of 23,945 MT or 82% of the total reported catch inside the Seychelles EEZ whilst Vessels under other fishing agreements accounted for 11% of the total EEZ catch (table 1.6)
- This represents an increase of 56% in catches inside the Seychelles EEZ over the same period in 2013 reported by the EC and a decrease of 44% and 34% by Seychelles registered vessels and vessels under other agreements respectively.

1.7. Landing and Transhipment Statistics

- Time series analysis of landing and transhipment shows that following a drop of 37% in the volume of purse seine catches unloaded in Port Victoria in 2007, due to a drop in total catch in WIO, the landing and transhipment has thereafter remained consistent (table 1.7 and figure 8).

- Similar to previous years, Port Victoria remained the principal port in the WIO for tuna transhipment and landing during 2013. A total of 233,574 MT of tuna was unloaded through port Victoria compared to 186,740 Mt in 2012. This represents 84% of the total landing and transhipment for that year (figure 9) and a 25% increase over the previous year.
- During the first semester of 2014, transhipment and landing through Port Victoria amounted to 110,961 MT representing 87% of the total tuna catches landed and transhipped during that period. For the same period in 2013 a total of 94,013 MT was unloaded in Port Victoria (table 1.7 A). This represents an increase of 18% over the same period in 2013.
- During that period, 75% of the total catch unloaded in Port Victoria or 83,563 MT of tuna unloaded in Port Victoria were transhipped onto reefer or cargo vessels for export whilst the remaining 25% or 27,398 Mt of tuna were landed in Port Victoria for processing at local companies (table 1.8). During the same period in 2013 a total of 56,712 MT of tuna were transhipped and 37,301 MT were landed in Port Victoria. This represent an increase of 47% in transhipment and a decrease of 27% in landings in port Victoria during the first semester of 2014 compared to the same period the previous year.
- Out of the 83,563 MT of tuna transhipped in Port Victoria during the first semester of 2014, 75% or 62,844 MT were transhipped onto reefer vessels whilst 25% or 20,668 MT were transhipped into containers for export. During the same period in 2013, 77% or 43,500 MT of tuna were transhipped onto reefer vessels and 23% or 13,177 MT of tuna were transhipped into containers (table 1.9).
- Overall, the Spanish fleet landed and transhipped a total of 55,567 MT in port Victoria representing 50% of the total catch unloaded in Port Victoria during the first semester of 2014 whilst the French and Seychelles fleet accounted for 22% and 18% respectively (table 1.8).
- Analysis of catch landed in port Victoria by fleet shows that historically, the Spanish fleet dominated the landing in Port Victoria. However during the first semester of 2014, 48% of total catch landed were by the French fleet, 33% by the Spanish fleet and 11% by the Seychelles fleet. Transhipment continued to be dominated by the Spanish fleet (56%) whilst the French and Seychelles fleet accounted for 15% and 18% of total transhipment in Port Victoria.

1.8. Fishing Ground

Map 1A and 1B show the distribution of reported catch of purse seiner by 1° square in the WIO for the years 2012 and 2013 respectively. The maps show that the 2013 fishing pattern appears to be similar to that of the previous year. However increase catches in the East Somalia and North West Seychelles area in 2013 and reduced catches in the South East Seychelles area were observed. The maps also show a decrease in yellowfin catches and an increase in skipjack catches in 2013.

Map 2A and 2B shows the distribution of reported catch of purse seiner by 1° square in the WIO for the 1st Semester of 2013 and 2014 respectively. The maps show significant decrease in catches in the Mozambique Channel during the first semester of 2014 when compared to the same period the previous year. Higher catches were observed in the East Somalia and North West Seychelles area.

Industrial Longline Fishery

2. SUMMARY OF INDUSTRIAL LONGLINE FISHERY

2.1. *Logbook Returned*

- The statistics published for 2013 are related to 57% logbooks captured in the database at the time when those statistical tables were generated compared to 83% for the previous year (Table 2.2).
- For the Seychelles Flagged vessels 89% of logbooks were returned to SFA for the year 2013 compared to 95% in 2012.

2.2. *Vessels Licensed and Active*

- Since 2006 the number of industrial longliners licensed to fish inside the Seychelles EEZ has been on a decreasing trend to reach a record low of 65 vessels licensed in 2010. Since then the number of vessels taking licenses has increased to reach 170 vessels licensed in 2013 (table 2.1). This increase can be attributed to the decrease in Somalia piracy attack in the region; hence more licenses are being taken by the industrial longliners.
- In 2013 a total of 170 Vessels were licensed to fish inside the Seychelles EEZ out of which 31 vessels were Seychelles registered compared to 165 vessels licensed in 2012 which included 29 Seychelles registered vessels.
- It must be noted that the Seychelles flag vessels were licensed and active throughout the year 2012 and 2013 with a logbook returned of 95% and 89% respectively. Hence comparative analysis between the two years can be done. For the Taiwanese vessels comparative analysis can only be done between the first semester 2012 and 2013 due to lack of data captured for the second semester of 2013 (table 2.1A). However given that data for most vessels from other fleet were captured for the second semester of 2012 and first semester of 2013, comparative analysis for years 2012 and 2013 cannot be performed for the other fleet.
- On average, 26 Seychelles registered longliners vessels active during the year 2013 compared to 24 Vessels active during 2012. For Taiwanese vessels on average 24 vessels were active during the first semester 2013 compared to 14 vessels active during the same period the previous year.

2.3. *Fishing Effort, Catches and Catch Rate in WIO*

- The total catch and fishing effort of industrial longliners has been on the decreasing trend since 2005 to reach a record low of 8,275 MT in catches in 2011 corresponding to a record low of 7.7 million hooks sets (figure 10 and 11). This can be attributed to the decreasing trend in the number of vessels licensed and active during that period. In 2012 the catch increased by 180% corresponding to a 90% increase in fishing effort (table 2.2A).
- The industrial Longliners displayed a steady catch rate (around 0.40 Mt/1000 hooks) over the period 2006 to 2010. In 2012, the catch rate increase to reach 0.69 Mt/1000 hooks, the highest

recorded over the last 10 years (figure 12).

- The total catch reported by all industrial longline fleet during the first semester of 2013 decreased by 11% in 2013 despite a 73% increase in fishing effort. The total catch reported for the first semester of 2013 is estimated at 7,615 MT obtained from a fishing effort of approximately 17.5 million hooks. The catch rate reported was 0.44 MT/1000 hooks (table 2.2B).
- For same period in 2012, a total catch of 8,554 MT was reported base achieved from a fishing effort of approximately 10.08 million hooks giving a mean catch rate of 0.85 MT/1000 hooks.
- Monthly analysis of catch rate shows that, the highest catch rate was recorded in the month of April (0.56 MT/ 1000 hooks) during the first semester of 2013 and in the month of march (1.10 MT/ 1000 hooks) during the same period the previous year.

2.3.1. Fishing Effort, Catches and Catch Rate in WIO by Fleet

- The Seychelles fleet reported an estimated catch of 10,565 Mt for the year 2013 based on 89% logbook returned. This was achieved from a fishing effort of 22.32 million hooks thus giving a mean catch rate of 0.47 MT/1000 hooks. This represents a decrease of 28% in catches despite an increase of 18% in fishing Effort when compared to the previous year (table 2.2C). In 2012, the Seychelles fleet reported a total catch of 14,692 MT from a fishing effort of approximately 19 million hooks. The mean catch rate was 0.77 MT/ 1000 hooks.
- The Taiwanese fleet total catch for first semester of 2013 stands at 1,866 MT achieved from a fishing effort of 4.31 million hooks with a mean catch rate of 0.43 MT/1000 hooks. For 2012, the Taiwanese fleet reported a total catch of 7,174 MT from a fishing effort of 12.59 million hooks thus giving a mean catch rate of 0.57 MT/1000 hooks (table 2.2D).
- The remaining 496 MT of tuna reported for the first semester of 2013 were taken by vessels from other countries achieved from a fishing effort of 1.34 million hooks giving a mean catch rate of 0.37 MT/1000 hooks (table 2.2E).

2.4. Species Composition in WIO

- During the first six months of both 2012 and 2013, bigeye tuna dominated the catch of the industrial longline fleet accounting for 73% and 525% of the total catch respectively. During the first semester of 2013, yellowfin tuna accounted for 10% and the category ‘other species’ accounted for 27% of the total catch. During the same period the previous year yellowfin tuna and other species represented 9% and 11% of the total catch respectively (table 2.2B).

2.5. Activity inside the Seychelles EEZ

- Time series of total catch and fishing effort of industrial longliners inside the Seychelles EEZ shows similar trend to that in the WIO. Both catch and effort inside the Seychelles EEZ has been on a decreasing trend since 2005 to reach a record low of 1,338 MT in catches in 2011 corresponding to a record low of 2.4 million hooks sets (figure 13 and 14). This can be

attributed to the decreasing trend in the number of vessels licensed and active during that period. In 2012, a significant increase of over 500% in both catch and effort were recorded returning the catch level to 9,250 MT similar to that of 2006. In 2012 the catch rate of 0.59 MT/1000 hooks reported inside the Seychelles EEZ was the highest recorded for the past 10 years (table 2.3 and figure 15).

- According to logbooks received at SFA to date, a total catch of 2,630 MT or 35% of the total industrial longline catch during the first semester of 2013 was reported to have been caught inside of the Seychelles EEZ. This was obtained from a fishing effort of approximately 6.4 million hooks giving a mean catch rate of 0.41 MT/ 1000 hooks (table 2.3A). This represent an increase of 41% in total catch relating to a 186% in fishing effort compared to the same period the previous year.
- For the same period of the previous year, a total catch of 1.870 MT or 22% of the total longliners catch obtained from a fishing effort of approximately 2.2 million hooks was reported to have been caught inside of the Seychelles EEZ, thus giving a mean catch rate of 0.84 MT/1000 hooks.
- Catches inside the Seychelles EEZ were dominated by bigeye tune accounting for 59% of the total catch between January to June 2013 whilst yellowfin tuna and ‘other species’ accounted for 14% and 17% respectively. During the same interval in 2012, bigeye tuna accounted for 71% of the total catch followed by yellowfin tuna and ‘other species’ accounting for 14% and 10% respectively.
- Analysis of monthly trend shows that during the first six months of 2013, higher catches were recorded inside the Seychelles EEZ during the month of January where a total of 1,240 MT of tuna was reported to have been caught whilst during the same period the previous year, higher catches was reported in the month of April (1295 MT).

2.6. *Statistics of Seychelles Flagged Vessels*

- The fishing effort for Seychelles registered industrial longliners has shown similar trend in WIO and inside the Seychelles EEZ from the year 2004 to 2012. Between the year 2006 and 2011, the effort remained more or less steady in both WIO and inside the Seychelles EEZ and has increased considerably in 2012 (table 2.4 and figure 17). Same observations were made for CPUE (figure 18) and total catch (figure 16).
- For the year 2013, the Seychelles flagged industrial longliners reported an estimated catch of 10,565 Mt representing a 28% drop in catches in WIO despite an 18% increase in fishing effort, compared to a total estimated catch of 14,692 Mt achieved form a fishing effort 18.97 million hooks reported during the previous year (table 2.4A).
- The Seychelles flagged industrial longliners reported to have caught 70% of their total catch or 7,392 MT of tuna on the high Seas and 24% of their catches or 2,522 MT in the Seychelles EEZ in 2013. This represent an increase of 38% in catches corresponding to 73% increase in fishing effort inside the Seychelles EEZ. The CPUE stands at 0.58 MT/ 1000 hooks in 2013 inside the Seychelles EEZ compared to 0.72 MT/ 1000 hooks in 2012 (table 2.4A).

- During the previous year, 81% (or 11,924MT) and 12% (or 1,821 MT) of the Seychelles flagged industrial longliners catches were caught on the high Seas and inside the Seychelles EEZ respectively.

2.7. Industrial Longliners statistics by Access Regime

- During the year 2013, industrial longliners licensed to operate inside of the Seychelles EEZ were operating under the two main fishing agreements; the Taiwan Deep-sea Tuna Longline Boat Owners and Exporters Association (TTA) and Top Fortune Agreement (TFI). It must be noted that all Seychelles flagged vessels were operating under the TFI agreement.
- For the year 2013, Vessels operating under the Top Fortune (TFI) agreement accounted for the 65% (36915 MT) of the total catch inside the EEZ where Seychelles flagged vessels represents 55% of the total catch. Vessels fishing under the Taiwan Deep Sea Fisheries (TTA) agreement reported a total catch of 1,603 MT or 35% of the total reported catch inside the Seychelles EEZ (table 2.5A). It must be noted that this proportion is influenced by the higher level of logbook returned by the Seychelles flagged vessels and lower level for other vessels.
- For the previous year vessels operating under TFI agreement for only 29% of the total catch inside the EEZ whilst Vessels fishing under the TTA agreement accounted for 71% of the total reported catch inside the Seychelles EEZ.

2.8. Landing and Transhipment Statistics

- The SFA has stepped up its effort to collect, capture and analyse landing and transhipment data of all Seychelles Flagged industrial longliners in all ports unloaded and is currently capturing such data in its database. The monthly landing and transhipment statistics will be published in table 2.6 in the next edition of this statistical bulletin.

2.9. Fishing Ground

- Map 4A and 4B show the distribution of reported catch of industrial Longliners by 1° square in the WIO for the years 2012 and 2013 respectively. The maps show that the 2013 fishing pattern appears to be the similar to that of the previous year with significant decrease in catches the Indian Ocean Monsoon gyre (refer to page VII for Indian Ocean fishing Zones) and increase in catches of species reported as ‘others’ in the Indian Ocean subtropical gyre between 30° S and 40°S and 30°E and 40°E and in Albacore between 30° S and 40°S and 80°E and 100°E.
- Map 5A and 5B shows the distribution of reported catch of Industrial Longliners by 1° square in the WIO for the 1st Semester of 2012 and 2013 respectively showing similar observations as for the yearly maps.
- Map 6A and 6B shows the distribution of reported catch of Industrial Longliners by 1° square in the WIO for the 2nd Semester of 2012 and 2013 respectively showing similar observations as for the yearly maps.

Semi - Industrial Longline Fishery

3. SUMMARY OF SEMI INDUSTRIAL FISHERY

3.1. Vessels Active and Trip Information

- Over the last 10 years, the number of vessels active in the semi-industrial longline fishery ranged between 4 to 9 vessels and the total fishing trips spanned between 23 to 113 fishing trips (table 3.0).
- For the year 2013, 6 semi-industrial longliners conducted a total of 68 fishing trips targeting tuna and swordfish compared to 63 fishing trips conducted in 2012 by 7 vessels (table 3.1).
- During the first semester of 2014, 7 vessels conducted 16 fishing trips compared to 6 vessels conducting 44 fishing trips during the same period the previous year. This represents a decrease of 64% in number of trips conducted from January to June 2014 despite the increase of 1 vessel. The drop in fishing trips may be due to the semi industrial vessels switching to fishing demersal species instead of pelagic fish.

3.2. Fishing Effort, Catches and Catch Rate

- The trend in semi industrial longline catches over the last 10 years shows that following a 239% increase in catches to a total of 294 MT in 2005, total catch remained more or less consistent for the period 2006 to 2008, then increased to reach a peak of 329 MT in 2009 and has since then remained steady (figure 19). However fishing effort has followed an increasing trend from 95,495 hooks in 2004 to a peak of 506,334 hooks in 2010, then dropped by 43% in 2011 and has since then been on the increase (figure 20). The CPUE fluctuated between 2004 and 2008 and has since then has remained more or less constant over the last five years (figure 21).
- The total catch reported for the whole year 2013 by semi-industrial longliners was estimated at 262 MT obtained from a fishing effort of approximately 398,770 hooks. This represents a slight decrease of 3% from the 271 MT of catches reported in 2012 despite a 21% increase in fishing effort (table 3). The catch rate for 2013 was 0.66 MT/1000 hooks compared to 0.82 MT/ 1000 hooks the previous year.
- During the first semester of 2014, the total catch reported was only 63 MT compared to 172 MT during the same period the previous year representing a significant decrease of 63% in catches corresponding to a decrease of 71% in fishing effort (table 3.1).
- The fishing effort decreased from 251,560 hooks during the first six months of 2013 to a mere 73,870 hooks during the same period in 2014.
- The catch rate for that period in 2014 stood at 0.85 MT/1000 hooks compared to 0.65 MT/1000 hooks in 2013.
- During the first semester of 2014, highest CPYE was recorded during the month of June where 1.26 MT/ 1000 hooks was reported whilst during the same period the previous year, highest CPUE was reported during the month of May at 0.87 MT/ 1000 hooks.

3.3. Species Composition

- Over the last 10 years Swordfish has remained the main target species of the semi-industrial longline fishery accounting for 55% of the total on average per year.
- For the year 2013, swordfish dominated the semi industrial fishery catches accounting for 62% of the total catch followed by yellowfin tuna (21%) and bigeye Tuna (9%). In 2012 Swordfish represented 59% of the total catch whilst yellowfin and bigeye tuna represented 17% and 14% respectively.
- During the first semester of 2014, swordfish remained the dominant species accounting for 75% of the total catch, whilst yellowfin and bigeye tuna made up 18% and 3% of the total catch respectively. During the same period in 2013 swordfish and yellowfin tuna accounted for 65% and 16% of the total catch respectively.

4. SUMMARY OF ARTISANAL FISHERY

4.1. *Vessel Active*

- During the year 2013, on average 417 artisanal boats were operating per month, out of which on average 69% or 287 boats operating were outboard, 24% or 99 were whalers and 5% or 20 were schooners. It must be noted that few semi-industrial longliners also conducted some fishing trips targeting demersal fish.
- During the first semester of 2014, on average 422 boats were operating per month, out of which on average 69% or 291 boats operating were outboard, 23% or 97 were whalers and 5% or 22 were schooner, similar to the same period the previous year. The number of semi-industrial longliners conducting artisanal fishing trips increased from an average of 2 vessels per month during the first semester of 2013 to an average of 4 vessels active per month during the same period in 2014.

4.2. *Catch Statistic by Vessel Type*

- Time series of catches shows that between 2004 and 2008 total catch by artisanal boats remained more or less constant averaging to 4285 MT per year. In 2009 the artisanal catches dropped by 37% and have remained more or less the same for the following 3 years with an average of 2658 MT per year between 2009 and 2012 (table 4.2 and figure 22).
- During 2013, the artisanal total catch increased considerably by 65%, returning to the pre-2009 level. A total of 4,150 MT of fish was landed on Mahé, Praslin and La Digue where 87% of the total catch was landed on Mahé. For the whole of 2013, 52% of the artisanal catches were taken by whalers and 37% and 9% were taken by outboard and schooners respectively. In 2012 outboard catches accounted for 51% of the total catch whilst whalers and schooners represented 31% and 16% of the total catch (Table 4.2A)
- The estimated total catch for the first semester of 2014 stands at 1,939 MT compared to 1,812 MT of fish landed during the same period in 2013 representing a slight increase of 7% in total catch. Notable increase was observed in catches by semi-industrial longliners conducting artisanal fishing trip which increased by 166% from 24.9 Mt during the first semester of 2013 to 66.4 Mt during the same period in 2014. Pirogue and outboard catches recorded increase in catches whilst decline was observed in whalers, schooner and fishermen on foot catches.
- Between January to June 2014, whaler and outboard vessels accounted for 44% and 40% of the total catch respectively compared to 53% and 32% of catches landed by whaler and outboard during the same period, the previous year.

4.3. *Catch Statistics by Gear Type*

- Trend analysis of catches by gear type shows that handline fisheries dominated artisanal catches followed by encircling gillnet (table 4.3 and figure 24). Typical of previous years, the handline

fishery dominated artisanal fisheries catches, accounting for 68% of total landings in 2013 followed by encircling gillnet (18%). Total catch by handline for the year 2013 is estimated at 2,822 Mt representing an increase of 114% over the 1,321 MT estimated for 2012.

- During the first semester of 2014, the total estimated catch by handline dropped by 13% from 1,355 MT during the first semester of 2013 to 1,180 MT during the same period in 2014. Catches by ‘other gears’ such as dropline, reels and hoop tangled net increased considerably from 37.2 MT for the first six months of 2013 to 104.9 MT during the same interval in 2014 (table 4.3A).
- Catches by handline fishery continued to dominate artisanal catches accounting for 61% of the total catch whilst encircling gillnet accounted for 22% of the total artisanal catches during the first semester of 2014 (table 4.3A). For the same period the previous year handline and encircling gill net represented 75% and 12% of the total catch respectively.

4.4. *Catch Statistics by Species*

- Between 2004 and 2012, artisanal catches has been dominated by carangues, bourgeois, job and maquereau doux accounting on average 23%, 17%, 13% and 9% of artisanal catch per year respectively (table 4.4 and figure 25).
- The most important species groups landed for the whole of 2013 were carangues (33%), maquereau doux (13%), job (10%) and bourgeois (8%) similar to the previous year where the artisanal catches were dominated by carangues (22%), maquereau doux (19%), job (8%) and bourgeois (8%).
- The same species dominated the artisanal fishery catches during the first semester of 2014 where carangues accounted for 23% of the total catch followed by job (12%), maquereau doux (10%) and bourgeois (8%) (Table 4.4A).

4.5. *Fishing Effort by Vessel Type and Gear Type*

- Time series of effort shows that between 2004 and 2008 total effort by artisanal boats conducting handline fishery remained more or less consistent averaging to 58,374 man days per year. In 2009 the handline fishery effort dropped by 31% and has since then remained more or less the same with an average of 40,657 man days per year between 2009 and 2012 (table 4.5 and figure 28). Fishing effort for trap fishery has remained more or less constant over the last 10 years averaging to 94,947 traps set per year (figure 29). For net fishery, the fishing effort has remained more or less constant between the period 2007 to 2011 and has since then been on the increased (figure 30).
- In 2013, the total effort for handline fishery was estimated at 47,082 men days whilst for the trap and net fishery, fishing effort was estimated to 97,802 traps sets and 3,468 sets respectively. These represent an increase of 42%, 14% and 49% in fishing effort in handline, trap and net fishery over the previous year respectively.
- During the first semester of 2014, a total of 26,096 men days were estimated for the handline fishery compared to 24,184 men days for the same fishery during the same period of 2013

representing a slight 8% increase in fishing effort in handline fishery. The schooner handline fishery recorded an increase of 25% in fishing effort whilst the pirogue handline fishery recorded a decrease of 50% in fishing effort (table 4.5).

- The total number of trap sets during the first semester of 2014 was 42,838 traps, more or less similar to the 42,461 traps sets during the same period the previous year. Significant decreases were estimated in number of traps sets by pirogue, whaler and fishermen on foot. This is because Outboard fishermen accounted for 98% of fishing effort in trap fishery during that period.
- A 45% increase was recorded in the net fishery during the first semester of 2014 where a total of 1,860 nets were set compared to 1,279 net sets during the same period in 2013.

4.6. *Catch Rate by Vessel Type and Gear Type*

- Time series of catch rate shows that between 2004 and 2013 catch rate by artisanal boats conducting handline fishery has remained more or less constant averaging to 57.1 kg/man day per year (table 4.6 and figure 34). CPUE for trap fishery has been on the decreasing trend from 2004 to 2009 and has since then remained stable (figure 35). CPUE for trap fishery has remained more or less constant over the period 2006 to 2011 and increased in 2012 (figure 36).
- The catch rate for handline fishery increased from 43.3 kg/ man day in 2012 to an estimated 64.9 kg/ men day in 2013. CPUE for the trap fishery is estimated at 5.1 kg/ trap similar to the previous year whilst CPUE for net fishery decreased from 297.6 kg/ set in 2012 to 213.9 kg/ set in 2013.
- The catch rate for the handline fishery decreased significantly from 60.7 kg/ men day during the first semester of 2013 to 47.9 kg/ men day during the same period in 2014. Decreased in catch rate were recorded in for all vessel type using handline (table 4.6A).
- The catch rate for the trap fishery is estimated at 5.2 kg/trap from January to June 2014 compared to 4.8 kg/trap during the same period, the previous years with significant increased in catch rate recorded for fishermen on foot.
- For the net fishery, the total catch rate increased from 164 kg/ set during the first semester in 2013 to 230.8 kg/ set for current period under study.

Port Activity & Vessel Expenditures

5. SUMMARY OF PORT ACTIVITY AND VESSEL EXPENDITURES

5.1. *Port Calls*

- For the year 2013, a total of 535 port calls were made by foreign vessels in the fishery industry in Port Victoria out of which 65% or 349 port calls were made by purse seiners and 16% and 10% were by industrial longliners and supply vessels respectively. The remaining 8% were made by reefer vessels (table 5.1A).
- During the first semester of 2014, a total of 170 port calls were made in port Victoria by vessels in the fisheries sector compared to 255 port calls made during the same period in 2013 representing a decrease of 33% in port calls.
- In terms of port calls by flag, 36% port calls and 34% of the Purse seiner's port calls during the first semester of 2014 were by the French and Spanish vessels respectively and 14% port calls were by the Seychelles flag vessels (table 5.1B). For the same period the previous years, the Spanish vessels accounted for 40% of the total purse seiners port calls whilst the French and Seychelles flagged vessels accounted for 25% and 21% respectively.
- During the first semester of 2014, no port calls have been reported by industrial longliners in Port Victoria compared to the same period the previous year where the industrial longliners made 58 port calls out of which 38 were by the Taiwanese vessel and 11 by the Chinese longliners.

5.2. *Number of Days in Port*

- In 2013, fisheries related Vessels spend a total of 2,827 days in Port Victoria with purse seiners spending the most number of days (1057 days) in port days followed by reefer vessels (903 days) and Industrial Longliners (792 days). On average a reefer vessel spent 20 days in port per port calls, a purse seiner spent 3 days, an industrial longliner spent 9 days and a supply vessel spent 1 day.
- For the first semester of 2014, fisheries related vessels spent a total of 606 days in port compared to 1185 days in port during the same period the previous year thus representing a decrease of 49% in number of days spent (table 5.2A). On average a reefer vessel spent 17 days in port whilst a purse seiner and a supply vessel spent on average 3 days in port per port calls.
- For the same period, the previous year a reefer vessel spent on average 18 days in port whilst a purse seiner and supply vessels spent on average 3 days and 2 day respectively.

5.3. *Vessel Expenditure*

- In 2013, vessel gross expenditures for goods and services in port Victoria amounted to SR1,588 million whereby 88% or SR1,405 million where bunkering, 1% or SR10 million were port dues and fees and the remaining 11% or SR172 million were for other expenses such as medical,

stevedoring, shipchandling etc(table 5.3A). It is worth noting that this is an approximate figure whereby the majority comprise of expenditure by purse seiners, supply vessels and reefer vessels as data for industrial longliners expenditure for the year 2013 to date has not yet made available to SFA by the respective agents.

- Data received from Seychelles Petroleum Company (SEYPPEC) for the year 2013, indicate that an approximate value of SR1,405 million worth of fuel were purchased by fisheries related vessels whereby purse seiners accounted for 96% or SR1351.8 million of the total fuel purchased.
- Approximately SR 10.4 million was collected from these vessels as port dues and fees and purse seiners and reefer vessels accounted for 58% and 39% respectively.
- During the first semester of 2014, expenditures by reefers, purse seiners and supply vessel amounted to approximately SR297.9 million compared to SR652.3 million for the same period in 2013 representing a drop of 54% in Vessel expenditures. It must be noted that at the close of the database for data processing data were still outstanding for the month of June 2014 (table 5.3A).
- Between January to May 2014, fuel purchased accounted for 91% and 94% of total purse seiners and supply vessels expenditures. Compared to the same period in 2013 fuel purchased represented 87% and 94% of total purse seiners and supply vessels expenditure (table 5.3B).

Export of Fish And Fish Product

6. SUMMARY OF EXPORT OF FISHERIES PRODUCT

6.1. Export of Fish and Fish Product (Volume)

- Readers should note that the export figures presented for the year 2013 and first semester of 2014 are still provisional.
- The total volume of fish and fish products exported for the whole of 2013 is estimated at 45,303 MT compared to 39451 MT in 2012 representing an increase of 15% in total volume of fish and fish product exported. An increase of 18%, 8% and 7% were recorded in export of canned tuna, fish meal and fresh/frozen fish whilst export of shark fins and sea cucumber and fish oil and fat all decreased by 85% and 40% and 16% respectively (table 7.1). In 2013, canned tuna and fish meal accounted for 81% and 16% of export of fish and fish products compared to 79% and 18% in 2012 respectively.
- For the first semester of 2014, only data for fresh/frozen fish, shark fins and sea cucumber were available. Since the 2nd semester of 2013 to date no shark fins have been exported. Fresh and frozen fish recorded a significant decrease of 87%, dropping from 194.5 Mt for the first six months of 2013 to 25.2 MT during the same period in 2014 (table 7.1A). Decrease was recorded for all species of fresh and frozen fish (table 7.1B).

6.2. Export of Fish and Fish Product (Value)

- The 45,303 MT of fish and fish products exported for the whole of 2013 corresponds to an estimated value of SR4,457 million representing an increase of 23% or SR829 million over the previous year. Canned tuna and fish meal exported value both increased by 25% and that of fish oil and fat increased by 12%. Export value of shark fins, sea cucumber and fresh and frozen fish all decreased by 78%, 47% and 11% respectively (table 7.2).
- During the first semester of 2014, a total value of SR 2,171 million of fish and fish product export was recorded representing a decrease of 10% over the same period the previous year. Increase was only recorded in export of sea cucumber where a 39% increase in value of sea cucumber was recorded. Significant decrease of 85% and 36% were recorded in export of fresh and frozen fish and fish meal respectively (table 7.2A).
